RE: Traffic Impact Analysis for Grass Valley Development – Camas, WA

Dear Curleigh,

This letter documents the Traffic Impact Analysis (TIA) prepared for the proposed Grass Valley mixed-use development along the south side of NW 38th Avenue in the City of Camas. The proposed development includes up to 276 apartment units, 100,000 square feet of corporate headquarters, 150,000 square feet of general office, and 20,000 square feet of retail split evenly between restaurant and grocery. Full occupancy of the development is expected by 2021.

Pursuant to City of Camas requirements, this report includes the following:

- Operational assessment of key study intersections under existing traffic conditions
- Review of reported crash data at study intersections
- Assessment of background traffic operations, including traffic associated with approved in-process developments but not the proposed project, under two road network scenarios:
 - Scenario 1: Re-align SE Bybee Road with NW Fisher Creek Drive (identified in City of Camas 6-year Street Priorities)
 - Scenario 2: Connect SE Bybee Road to SW Armstrong Drive (identified as a long-term connection in the *Camas Crossing Development TIA*)
- Trip generation and trip distribution estimate for the proposed development
- Assessment of future traffic conditions at the study intersections and the proposed site accesses after full build-out and occupancy of the proposed development under the two realignment scenarios outlined above
- Queueing, access spacing, sight distance, and on-site circulation review
- Findings and recommendations

This study assumes that activation of the SE 20th Street/NW Fisher Creek Drive intersection has occurred prior to site occupancy based on other approved and pending development. Based on the analysis provided and documented herein, the proposed development can be constructed while complying with City of Camas and City of Vancouver transportation requirements assuming provision of mitigation

measures identified in this report. Site-development related capacity improvement needs were identified at the SE 20th Street/SE 192nd Avenue intersection.

SE 20th Street/SE 192nd Avenue

- In Scenario 1, under 2021 total traffic conditions, the intersection does not satisfy City of Vancouver operating standards during the weekday p.m. peak hour.
 - Recommended mitigation to restore acceptable operations includes provision of a second westbound left-turn lane and traffic signal retiming that allocates additional green time to the primary north-south traffic patterns along NE 192nd Avenue.
- In Scenario 2, under both 2021 background and total traffic conditions, the intersection does not satisfy City of Vancouver operating standards during the weekday a.m. and p.m. peak hours.
 - Recommended mitigation to restore acceptable operations includes provision of a second westbound left-turn lane and a separate westbound right-turn lane as well as corresponding signal retiming that allocates additional green time to the primary north-south traffic patterns along NE 192nd Avenue.

Other Considerations

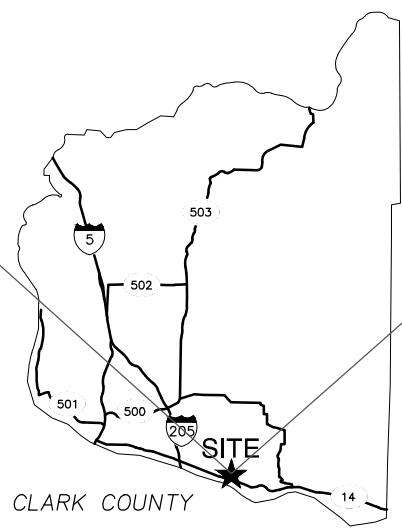

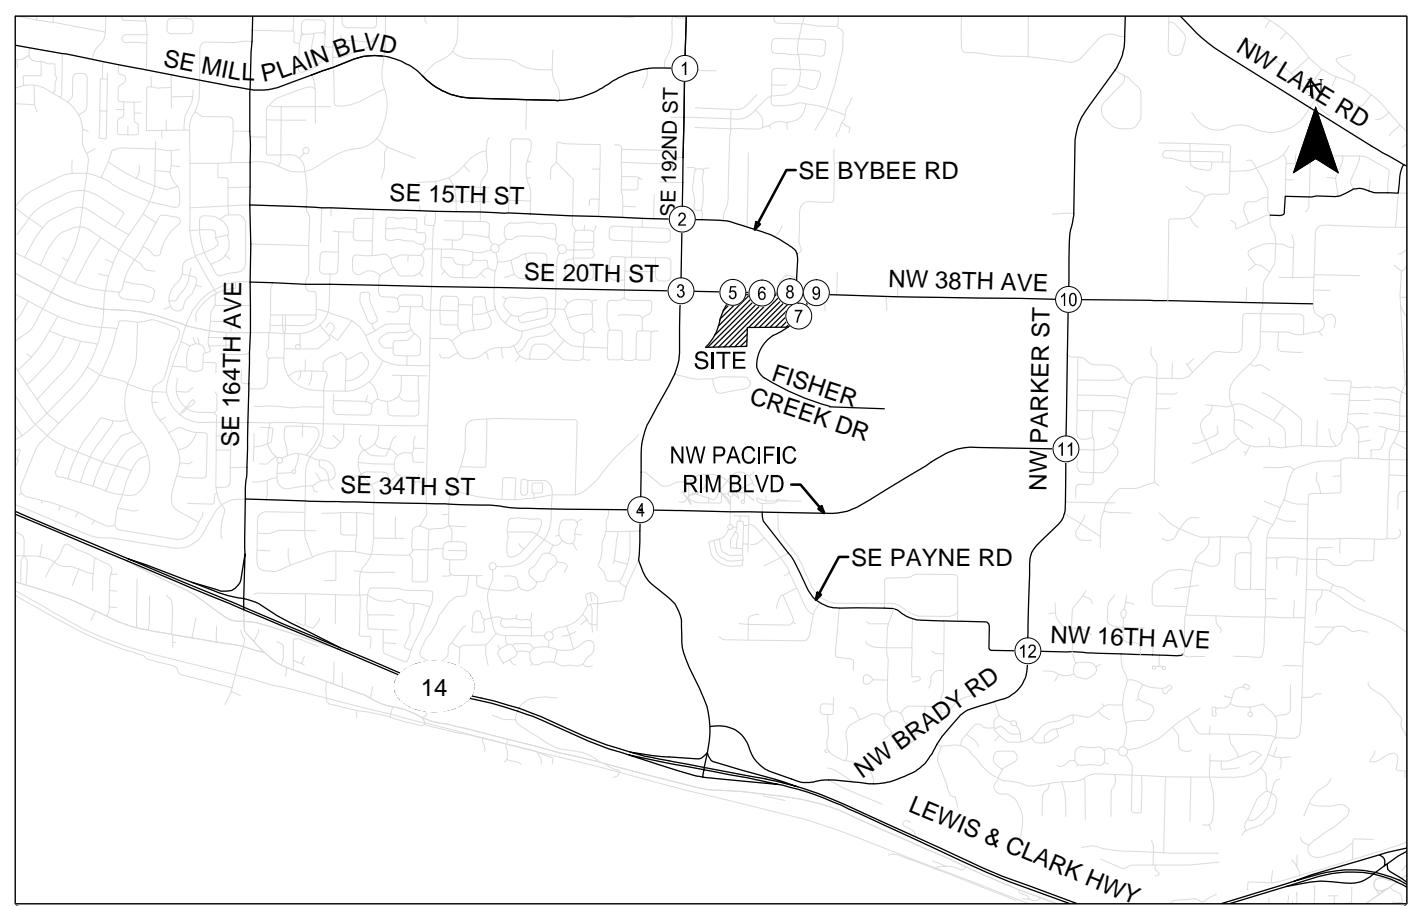

- On-site and off-site landscaping and any above ground utilities at the site driveways and internal roadways should be installed and maintained to ensure that adequate sight distance is provided upon buildout in accordance with City of Camas standards. Further, sight distance availability should be confirmed during the final engineering process.

The methodology of the analysis, findings, and recommendations are documented herein.

INTRODUCTION

Holland Acquisition Co., LLC proposes to construct a mixed-use development on the south side of NW 38th Avenue, west of NW Fisher Creek Drive. Currently, a residential home and a storage building occupy the 36-acre site and are accessible via two driveways on NW 38th Avenue. The site is currently zoned for Regional Commercial (RC) uses. Figure 1 illustrates the site location and Figure 2 shows the site plan.

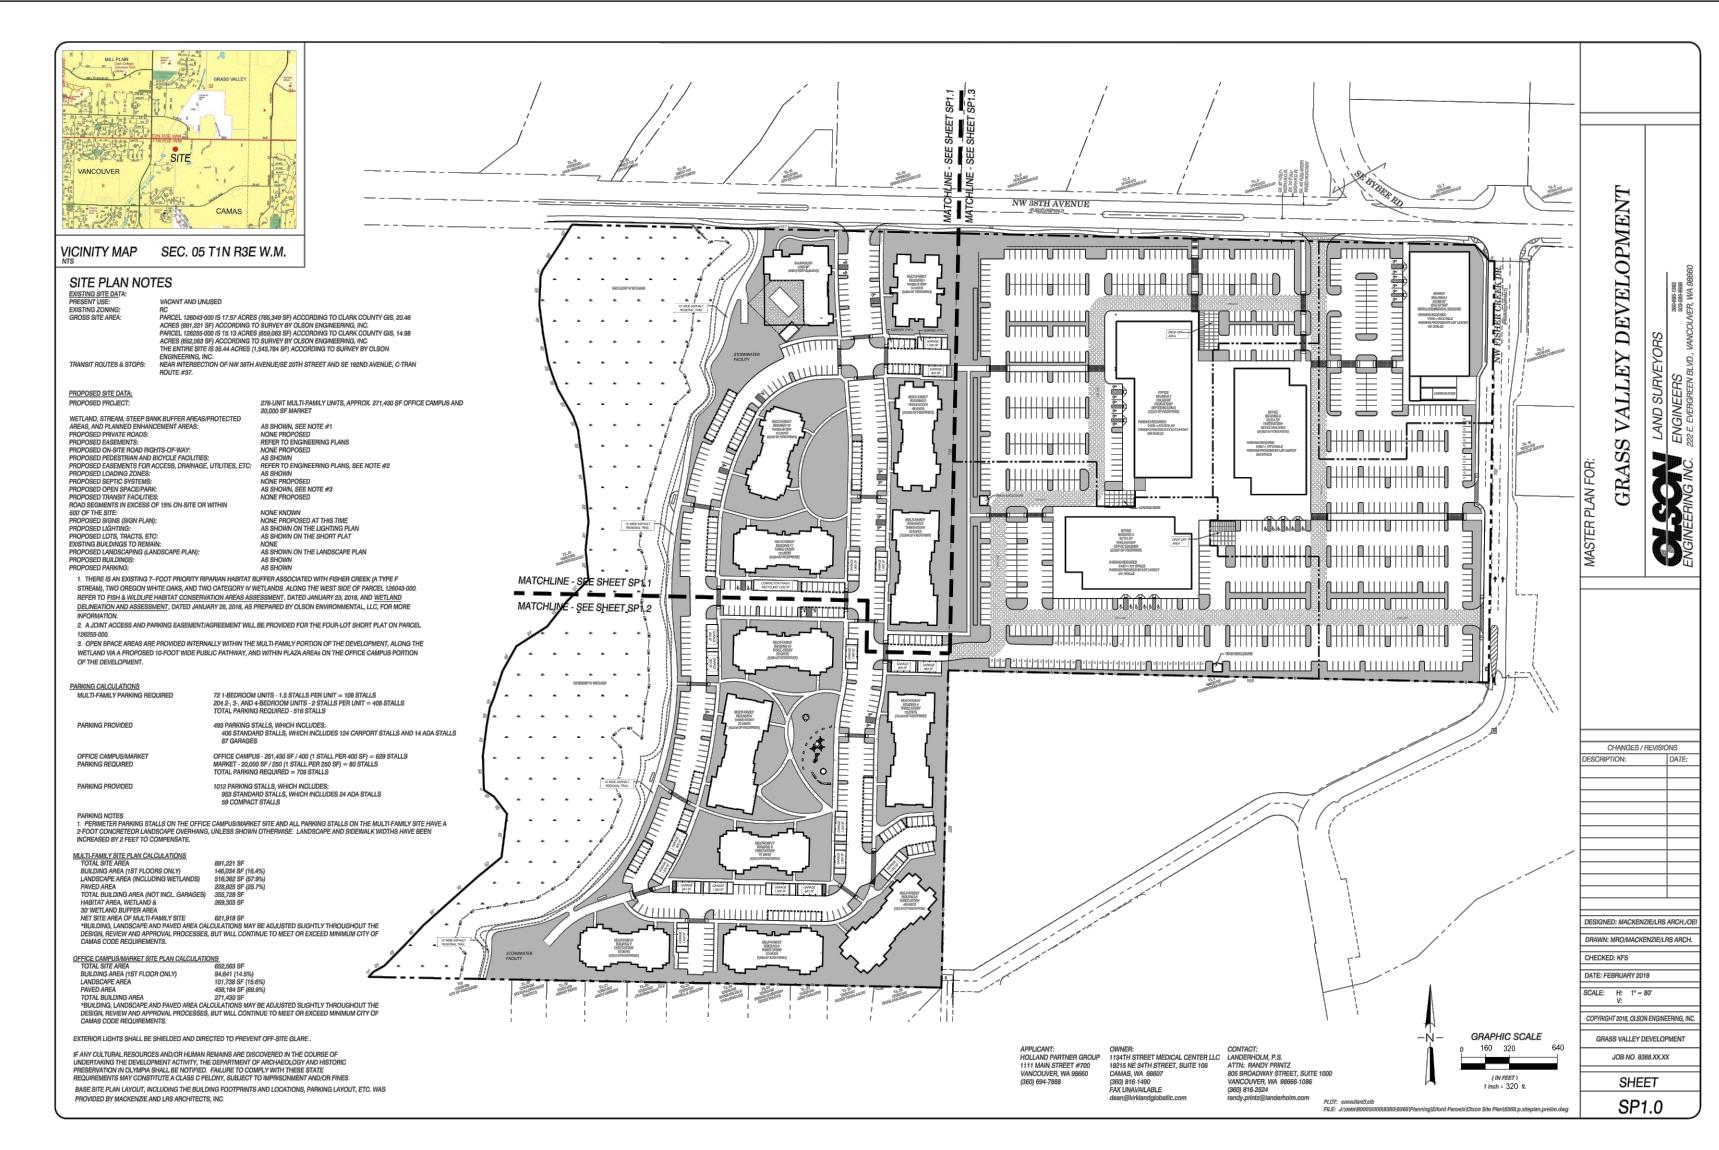

The proposed development will consist of up to 276 apartment units, 100,000 square feet of corporate headquarters, 150,000 square feet of general office, and 20,000 square feet of retail split evenly between restaurant and grocery. Full occupancy of the development is expected to occur by 2021.

- Study Intersections

Site Vicinity Map
Camas, Washington

Figure
1

SITE PLAN PROVIDED BY OLSON ENGINEERING
RECEIVED 2/21/18

Proposed Site Plan
Camas, Washington

Figure
2

Access to the development is proposed via:

- two unsignalized full movement public street circulator connections to NW 38th Avenue; and
- two unsignalized connections to NW Fisher Creek Drive south of NW 38th Avenue (and north of the gated entry to the Fisher Investments Campus).

REPORT SCOPE

This analysis determines the transportation-related impacts associated with the proposed mixed-use development. The study intersections and overall study area for this project were determined through a scoping process with City of Camas staff.

Analysis Periods

Weekday a.m. and p.m. peak hour traffic conditions were modeled at the study intersections.

Study Intersections

The following study intersections were included in the analysis as shown in Figure 1.

1. SE 192nd Avenue/Mill Plain Boulevard (operated and maintained by City of Vancouver)
2. SE 192nd Avenue/SE 15th Street (operated and maintained by City of Vancouver)
3. SE 192nd Avenue/SE 20th Street (operated and maintained by City of Vancouver)
4. SE 192nd Avenue/NW Pacific Rim Boulevard (operated and maintained by City of Vancouver)
5. NW 38th Avenue/Proposed Site Driveway 1
6. NW 38th Avenue/Proposed Site Driveway 2
7. Fisher Creek Drive/Proposed Site Driveway 3¹
8. NW 38th Avenue/SE Bybee Road (existing)
9. NW 38th Avenue/NW Fisher Creek Drive (with realigned Bybee Road under Scenario 1)
10. NW 38th Avenue/NW Parker Street
11. NW Pacific Rim Boulevard/NW Parker Street
12. NW 16th Avenue/NW Brady Road

Future Roadway Connectivity Scenarios

A mixed-use development known as the Camas Crossing Development is currently proposed north of the Grass Valley Development and was in the site plan review process at the City of Camas at the time this

¹ The two proposed driveway connections to Fisher Creek Drive were analyzed as a single driveway to be conservative.

study was prepared. City of Camas required that the Grass Valley Development TIA consider the proposed Camas Crossing Development as a vested project that will re-align SE Bybee Road from its current terminus on NW 38th Avenue to the east. Per City of Camas staff, alignment modifications to SE Bybee Road are still being finalized, with the following options being considered:

- Re-align SE Bybee Road with NW Fisher Creek Drive (identified in City of Camas 6-year Street Priorities);
- Connect SE Bybee Road to SE 202nd Avenue (identified as a short-term realignment in the *Camas Crossing Development Transportation Impact Analysis*, TIA); and
- Connect SE Bybee Road to SW Armstrong Drive (identified as a long-term connection in the *Camas Crossing Development TIA*).

Per City of Camas scoping direction, two future realignment scenarios have been considered for purposes of this TIA. The first scenario analyzes impacts with SE Bybee Road aligned at NW Fisher Creek Drive and the second scenario analyzes impacts with the connection occurring at some point further east.

ANALYSIS METHODOLOGY

Intersection Levels-of-Service

Level of service (LOS) analysis described in this report was primarily performed using Synchro 8 software in accordance with the procedures stated in the *2000 Highway Capacity Manual* (HCM, Reference 1). The intersection of NW Pacific Rim Boulevard/NW Parker Street was analyzed using HCS 7 software, which implements 2010 HCM multi-lane all-way stop capacity analysis procedures, due to analysis constraints of the *2000 Highway Capacity Manual* in analyzing four-way stop-controlled intersections with multi-lane approaches.

To evaluate worst-case conditions, the peak 15-minute flow rates of the weekday a.m. and p.m. peak hours were used in the evaluation of all intersection LOS. For this reason, the operations analyses reflect conditions that are likely to occur for the peak 15 minutes out of each weekday a.m. and p.m. peak hour.

Operating Standards

Study intersections within the City of Camas are subject to the following operating standards:

- City of Camas requires a LOS D or better and a volume to capacity ratio of 0.90 or less for all intersections within the city limits of Camas, which includes all study intersections not along SE 192nd Avenue.

Study intersections within the City of Vancouver are subject to the following operating standards, as stated in the City of Vancouver Municipal Code Section 11.80.130.B:

A proposed development that adds at least five net new peak hour trips to an intersection approach operating at an LOS E or lower within the required traffic impact analysis area may be denied based upon any of the following:

1. *For signalized intersections, when off-site intersection conditions are at a LOS F, or*
2. *For signalized intersections, when the LOS E and the volume to capacity ratio is greater than 0.95, or*
3. *For unsignalized intersections, when the volume to capacity ratio for any lane on any approach is greater than 0.95, and*
4. *When significant traffic hazards would be caused or materially aggravated by the proposed development.*

EXISTING TRAFFIC CONDITIONS

The existing conditions analysis identifies site conditions, surrounding land uses, and the current operational and geometric characteristics of roadways within the study area. The purpose of this section is to create a basis for comparison to future conditions.

Site Conditions and Adjacent Land Uses

The proposed development site is mostly vacant, except for two existing structures. The site is currently zoned for Regional Commercial (RC) uses. Table 1 summarizes the attributes of the key transportation facilities in the site vicinity.

Table 1. Existing Transportation Facilities and Roadway Designations

Roadway	Functional Classification	Cross Section	Posted Speed Limit	Sidewalks?	Bike Lanes?	On-street Parking?
SE 192 nd Avenue	Principal Arterial ¹	4 lanes ²	40 mph	Yes	Yes	No
Mill Plain Boulevard	Principal Arterial ¹	4 lanes ²	30/40 mph ⁴	Yes	Yes	No
SE 15 th Street	Collector Arterial ¹	2 lanes	40 mph	Partial	Yes	No
SE 20 th Street	Minor Arterial ¹	2/3 lanes	40 mph	Yes	Yes	No
SE 34 th Street	Principal Arterial ¹	4 lanes ²	40 mph	Partial	No	No
SE Bybee Road	Collector ³	2 lanes	30 mph	No	Partial	No
NW Fisher Creek Drive	Collector ³	2 lanes	30 mph	Partial	No	No
SE 202 nd Avenue	Local ³	2 lanes	30 mph	No	No	No
NW 38 th Avenue	Arterial ³	3 lanes	35/40 mph ⁵	Yes	Yes	No
NW Pacific Rim Boulevard	Arterial ³	4 lanes ²	35 mph	Yes	No	No
NW Parker Street	Arterial ³	2/4 lanes ²	35 mph	Partial	Partial	No
NW 16 th Avenue	Collector ³	2 lanes	25 mph	Partial	Partial	Partial
NW Brady Road	Collector/Arterial ³	2 lanes	35 mph	Partial	Partial	No

¹City of Vancouver Arterial Street System and Classification Map

²Cross-section includes additional left-turn lanes at major intersections

³City of Camas 2008 Federal Functional Classification Map

⁴Speed limit is 30 mph on eastbound approach at SE 192nd Avenue, 40 mph on westbound approach

⁵Speed limit is 40 mph on eastbound approach at SE 192nd Avenue, 35 mph on westbound approach

Pedestrian Facilities

Continuous sidewalks are provided on both sides of NW 38th Avenue between SE 192nd Avenue and NW Parker Street. A sidewalk is currently provided on the east side of NW Fisher Creek Drive. Sidewalks are currently absent on the west side of NW Fisher Creek Drive along the site frontage and will be constructed in conjunction with the proposed development.

Bicycle Facilities

Bike lanes are provided along both sides NW 38th Avenue in the site vicinity. Bike lanes are present along SE Bybee Road for approximately 100 east of SE 192nd Avenue but are not provided along the remainder of the roadway. Bike lanes are also provided along SE 192nd Avenue, Mill Plain Boulevard, SE 15th Street, SE 20th Street, and NW Parker Street.

Transit Facilities

There is no public fixed-route transit service within Camas. C-TRAN Route 37 operates along SE 192nd Avenue and SE 34th Street. Route 37 connects Fisher's Landing Transit Center and Downtown Vancouver. Service is provided on weekdays from 4:45 a.m. to 12:45 a.m., Saturdays from 7:15 a.m. to 11:30 p.m., and Sundays from 7:30 a.m. to 11 p.m. C-TRAN's "Connector" provides Camas with fully accessible dial-a-ride (reservation-based service) and scheduled stop service (no reservation required) at designated stops at Fisher's Landing Transit Center and Hiddenbrook Drive. Rides are provided on a first-come, first-served basis. Dial-a-ride services are available weekdays from 5:30-9:15 a.m. and 2:00-7:00 p.m.

Traffic Safety Summary

Crash data for the study intersections was obtained from the Washington Department of Transportation (WSDOT) for the three-year period from January 1, 2014 through December 31, 2016 and were reviewed to identify potential intersection safety issues. Table 2 summarizes the crashes reported at the study intersections. *Appendix "A" contains the detailed WSDOT crash data.*

Table 2: Intersection Crash History Summary

Location	Crash Severity			Crash Type						Total Crashes
	Fatal	Injury	PDO ¹	Rear End	Side-swatch	Angle	Turning Movement	Fixed Object	Other	
SE 192 nd Ave / Mill Plain Blvd	0	4	1	2	1	1	1	0	0	5
SE 192 nd Ave / SE 15 th St	0	2	3	4	0	0	1	0	0	5
SE 192 nd Ave / SE 20 th St	0	3	3	4	1	1	0	0	0	6
SE 192 nd Ave / NW Pacific Rim Blvd	0	4	5	1	1	3	4	0	0	9
NW 38 th Ave / SE Bybee Rd	0	0	0	0	0	0	0	0	0	0
NW 38 th Ave / NW Fisher Creek Dr	0	0	0	0	0	0	0	0	0	0
NW 38 th Ave / NW Parker St	0	3	2	0	0	0	2	3	0	5
NW Pacific Rim Blvd / NW Parker St	0	0	3	0	0	1	0	2	0	3
NW 16 th Ave / NW Brady Rd	0	0	4	1	0	1	0	0	2	4

¹PDO – Property damage only

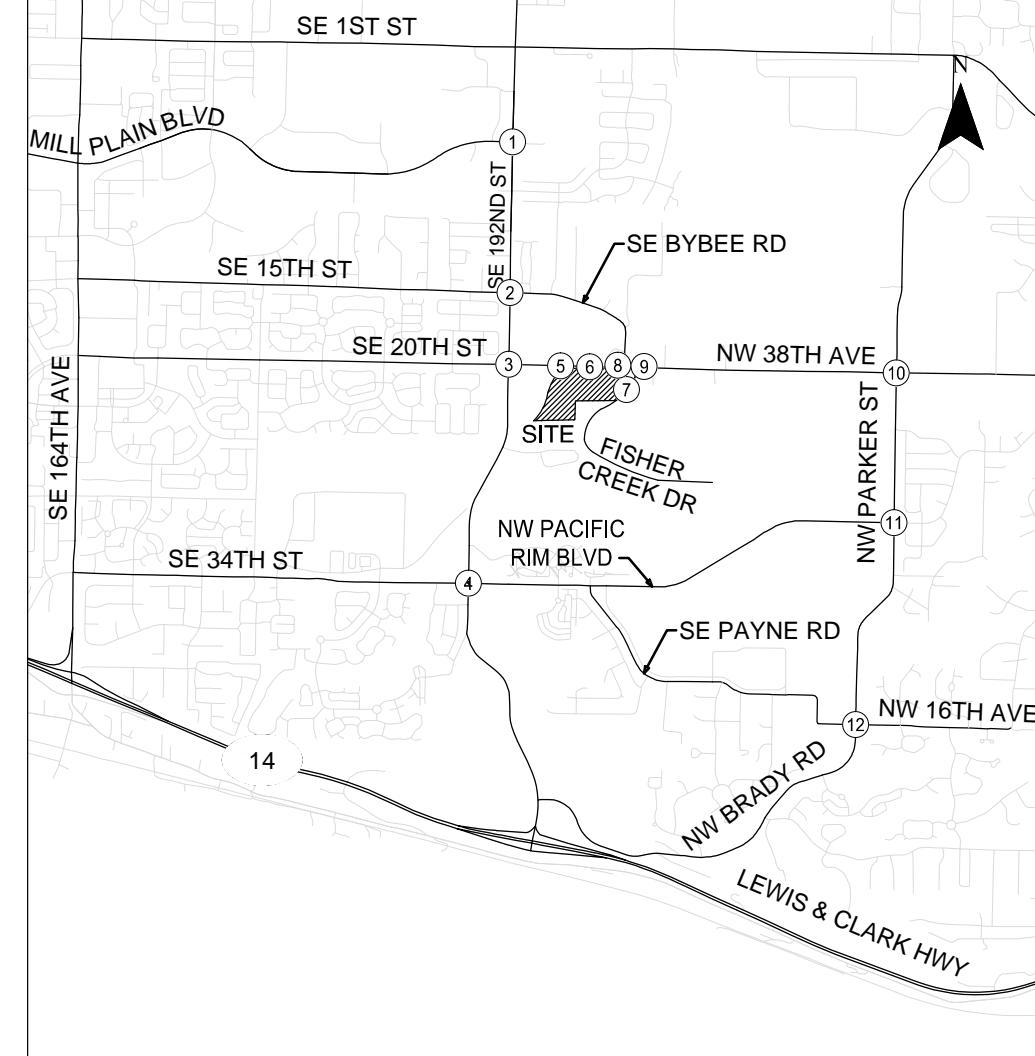

As shown in Table 2, no fatal crashes were reported. No crashes were reported along NW 38th Avenue along or near the site frontage. Based on reviewing the crash data and considering recent urban street improvements made along the NW 38th Avenue corridor, there are no apparent traffic safety hazards that require mitigation in conjunction with site development.

Existing Traffic Operations

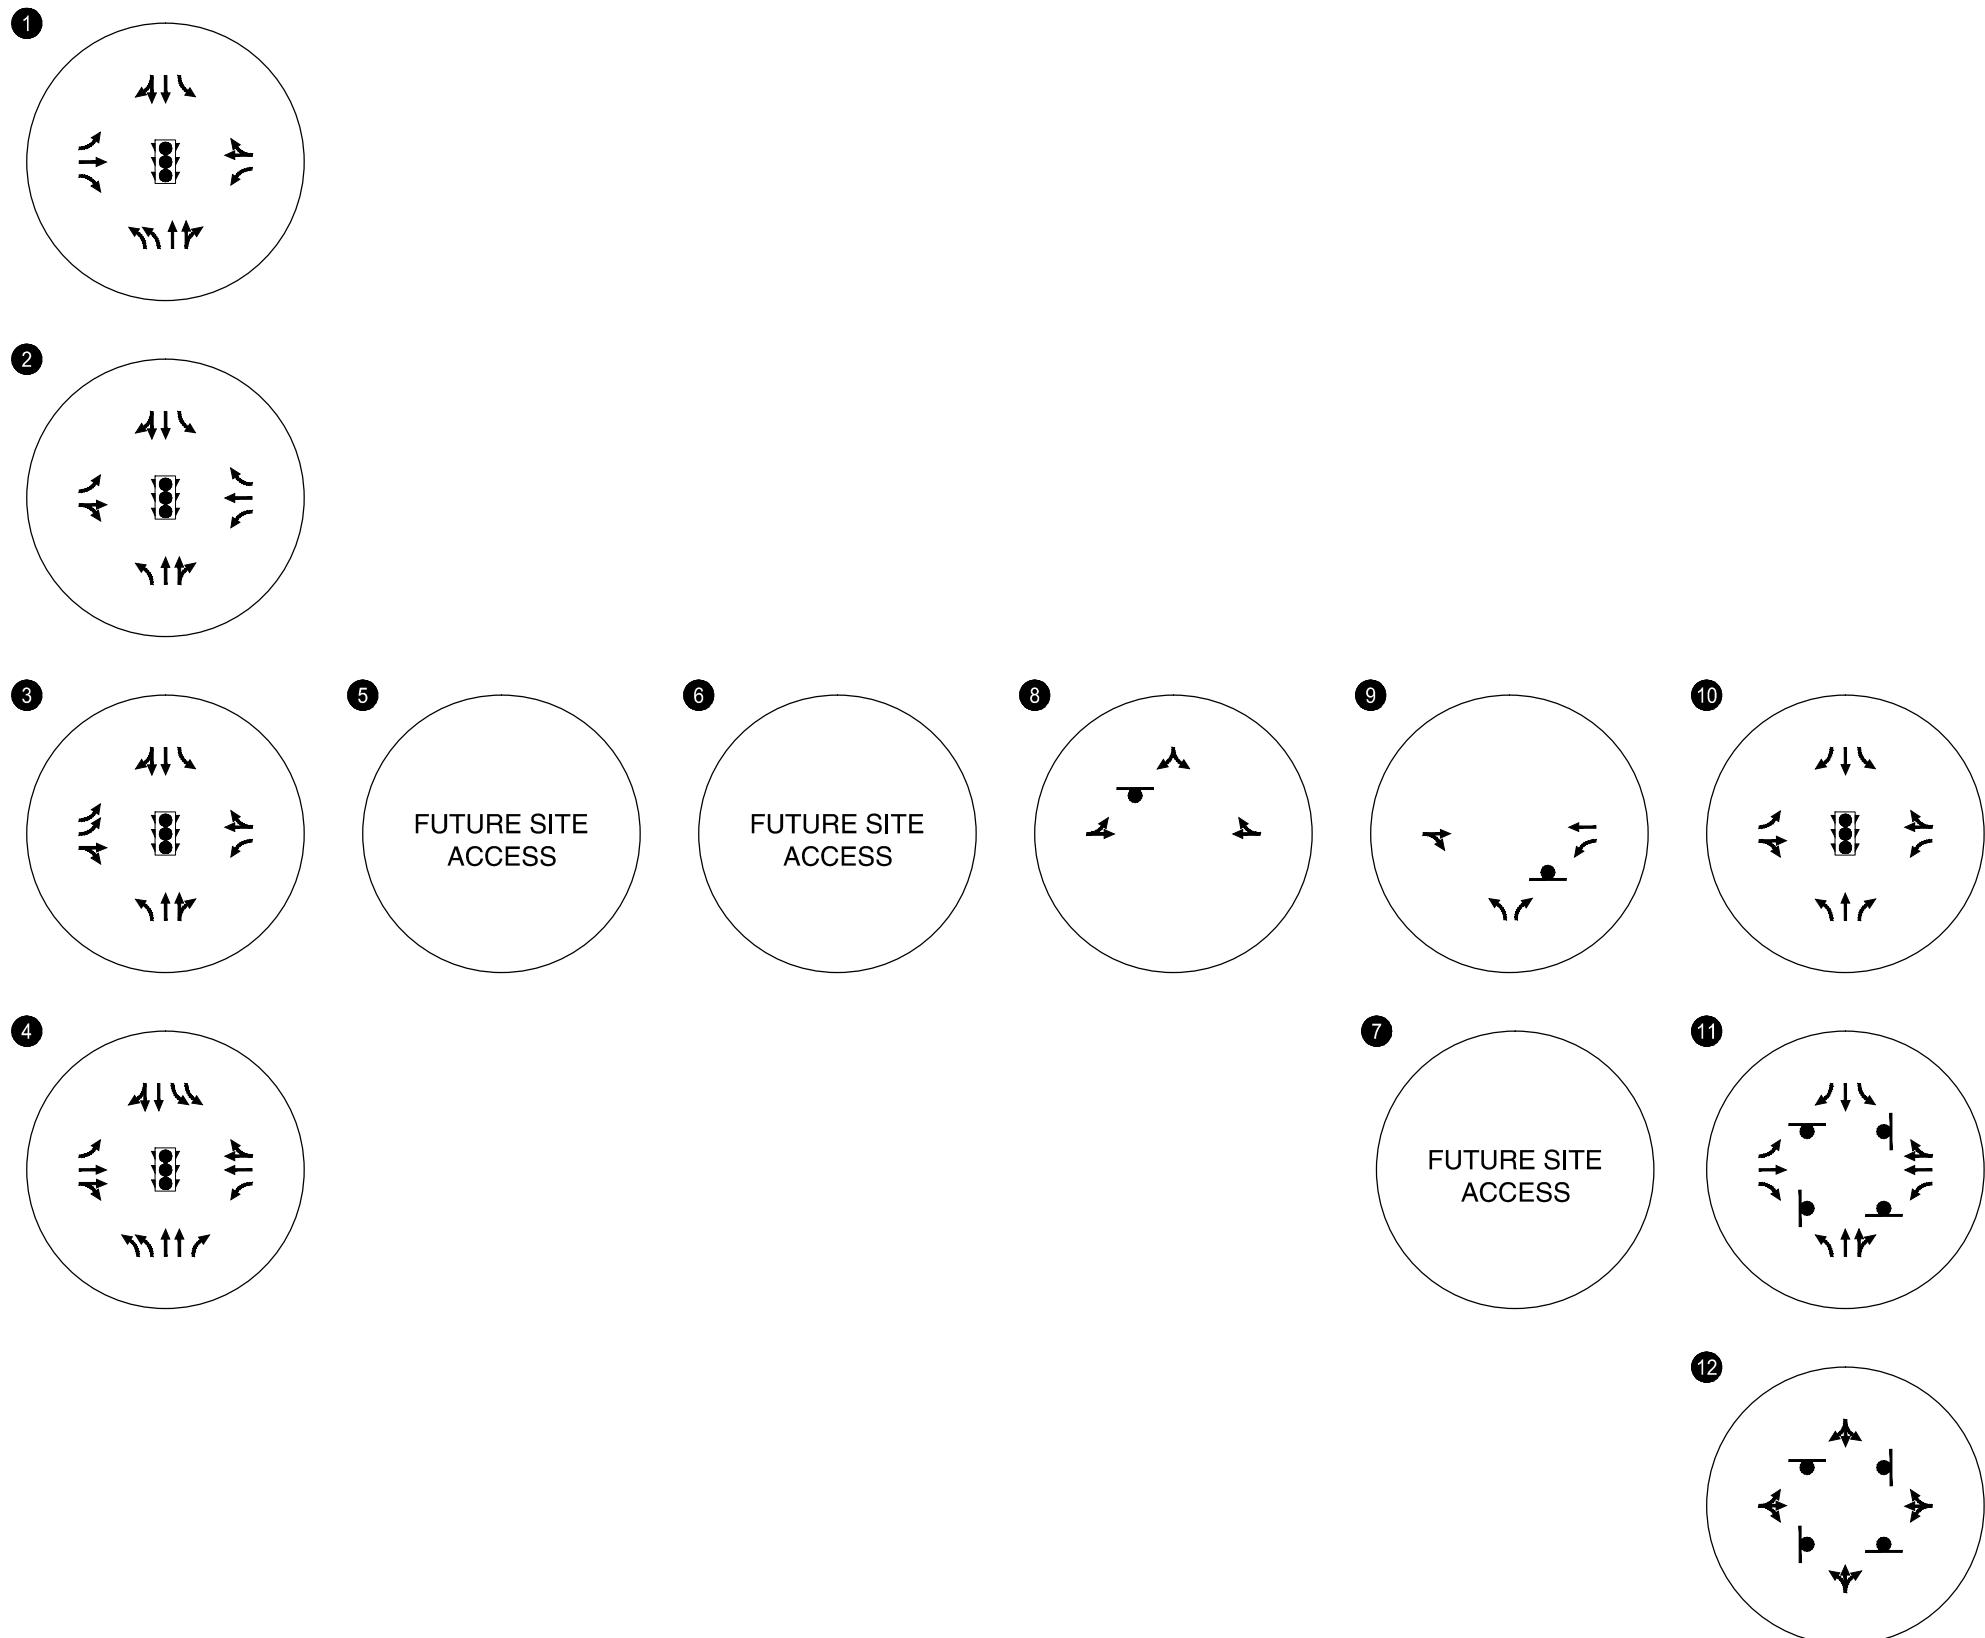

Figure 3 illustrates the existing lane configurations and traffic control devices at each of these study intersections.

Turning movement counts were obtained at the study intersections on a midweek day in June 2017. All counts were performed during the morning (7:00 to 9:00 a.m.) and evening (4:00 to 6:00 p.m.) peak periods. Public schools were in session in the cities of Camas and Vancouver on the days the traffic counts were collected. The traffic counts revealed a local system morning peak from 7:30 to 8:30 a.m. and evening peak from 4:35 to 5:35 p.m.

Figures 4 and 5 show the existing traffic volumes and operations at each of the study intersections during weekday a.m. and p.m. peak hours, respectively. As shown in the figures, all study intersections operate acceptably during both peak periods, satisfying the applicable LOS and/or volume to capacity ratio standards. *Appendix “C” includes the traffic count data, and Appendix “D” includes the existing traffic analysis worksheets.*

Figure
3

TRAFFIC IMPACT ANALYSIS

The future conditions analysis identifies how the study intersections will operate in the proposed development completion year of 2021. The following elements were analyzed to account for the impacts of the proposed development:

- 2021 Scenario 1 Background traffic conditions (SE Bybee Road aligned at NW Fisher Creek Drive **without** the proposed development);
- 2021 Scenario 2 Background traffic conditions (SE Bybee Road aligned to the east **without** the proposed development);
- 2021 Scenario 1 Total Traffic Conditions (SE Bybee Road aligned at NW Fisher Creek drive **with** the proposed development); and
- 2021 Scenario 2 Total Traffic Conditions (SE Bybee Road aligned to the east **with** the proposed development).

Year 2021 Background Conditions

The background traffic analysis identifies how the study intersections will operate in the proposed project build year with traffic growth from in-process developments within the study area, but not including the trips associated with the proposed Grass Valley project. The City of Camas identified the following approved in-process developments in the site vicinity that would potentially add trips to the study intersections:

1. NW 38th Dental Office
2. Belz Place Residential Development²
3. CJ Dens Residential Subdivision
4. Columbia Palisades Subdivision
5. Fisher Creek Campus Building 4
6. Green Mountain Estates
7. Green Mountain Master Plan³
8. Lofts at Camas Meadows
9. Parklands at Camas Meadows
10. The Village at Camas Meadows
11. Kate's Woods Apartments
12. Dawson Ridge Subdivision
13. Camas Crossing Development
14. Camas School District – Sharp Drive

Given the traffic volumes from multiple in-process developments and per direction from City of Camas engineering staff, no additional regional background growth rate was applied at City of Camas intersections. A two percent annual growth rate plus the identified in-process trips were applied along the SE 192nd Avenue corridor per the *City of Vancouver Traffic Study Guidelines*. Appendix "E" includes the estimated in-process volumes.

² The Belz Place Development is 50 percent complete. Traffic forecasts have been adjusted accordingly.

³ The Green Mountain Master Plan is five percent complete. Traffic forecasts have been adjusted accordingly.

Future Roadway Network Changes

The capital improvement programs for both the cities of Camas and Vancouver were reviewed to determine if any of the study area roadways or intersections are targeted for capacity enhancements. The SE Bybee Road realignment to the NW Fisher Creek Drive signal is listed on the City's 6-year street plan and Capital Facilities Plan. However, the Camas Crossing development proposes to shift the realignment to SE 20nd Avenue or another point further east through the Master Plan/Development Agreement process as previously described.

As the location of SE Bybee Road's connection with NW 38th Avenue is still being determined, two background scenarios were considered. Minor changes in the in-process trip assignments are expected between Scenario 1 (SE Bybee Road aligned at NW Fisher Creek Drive) and Scenario 2 (SE Bybee Road aligned to the east).

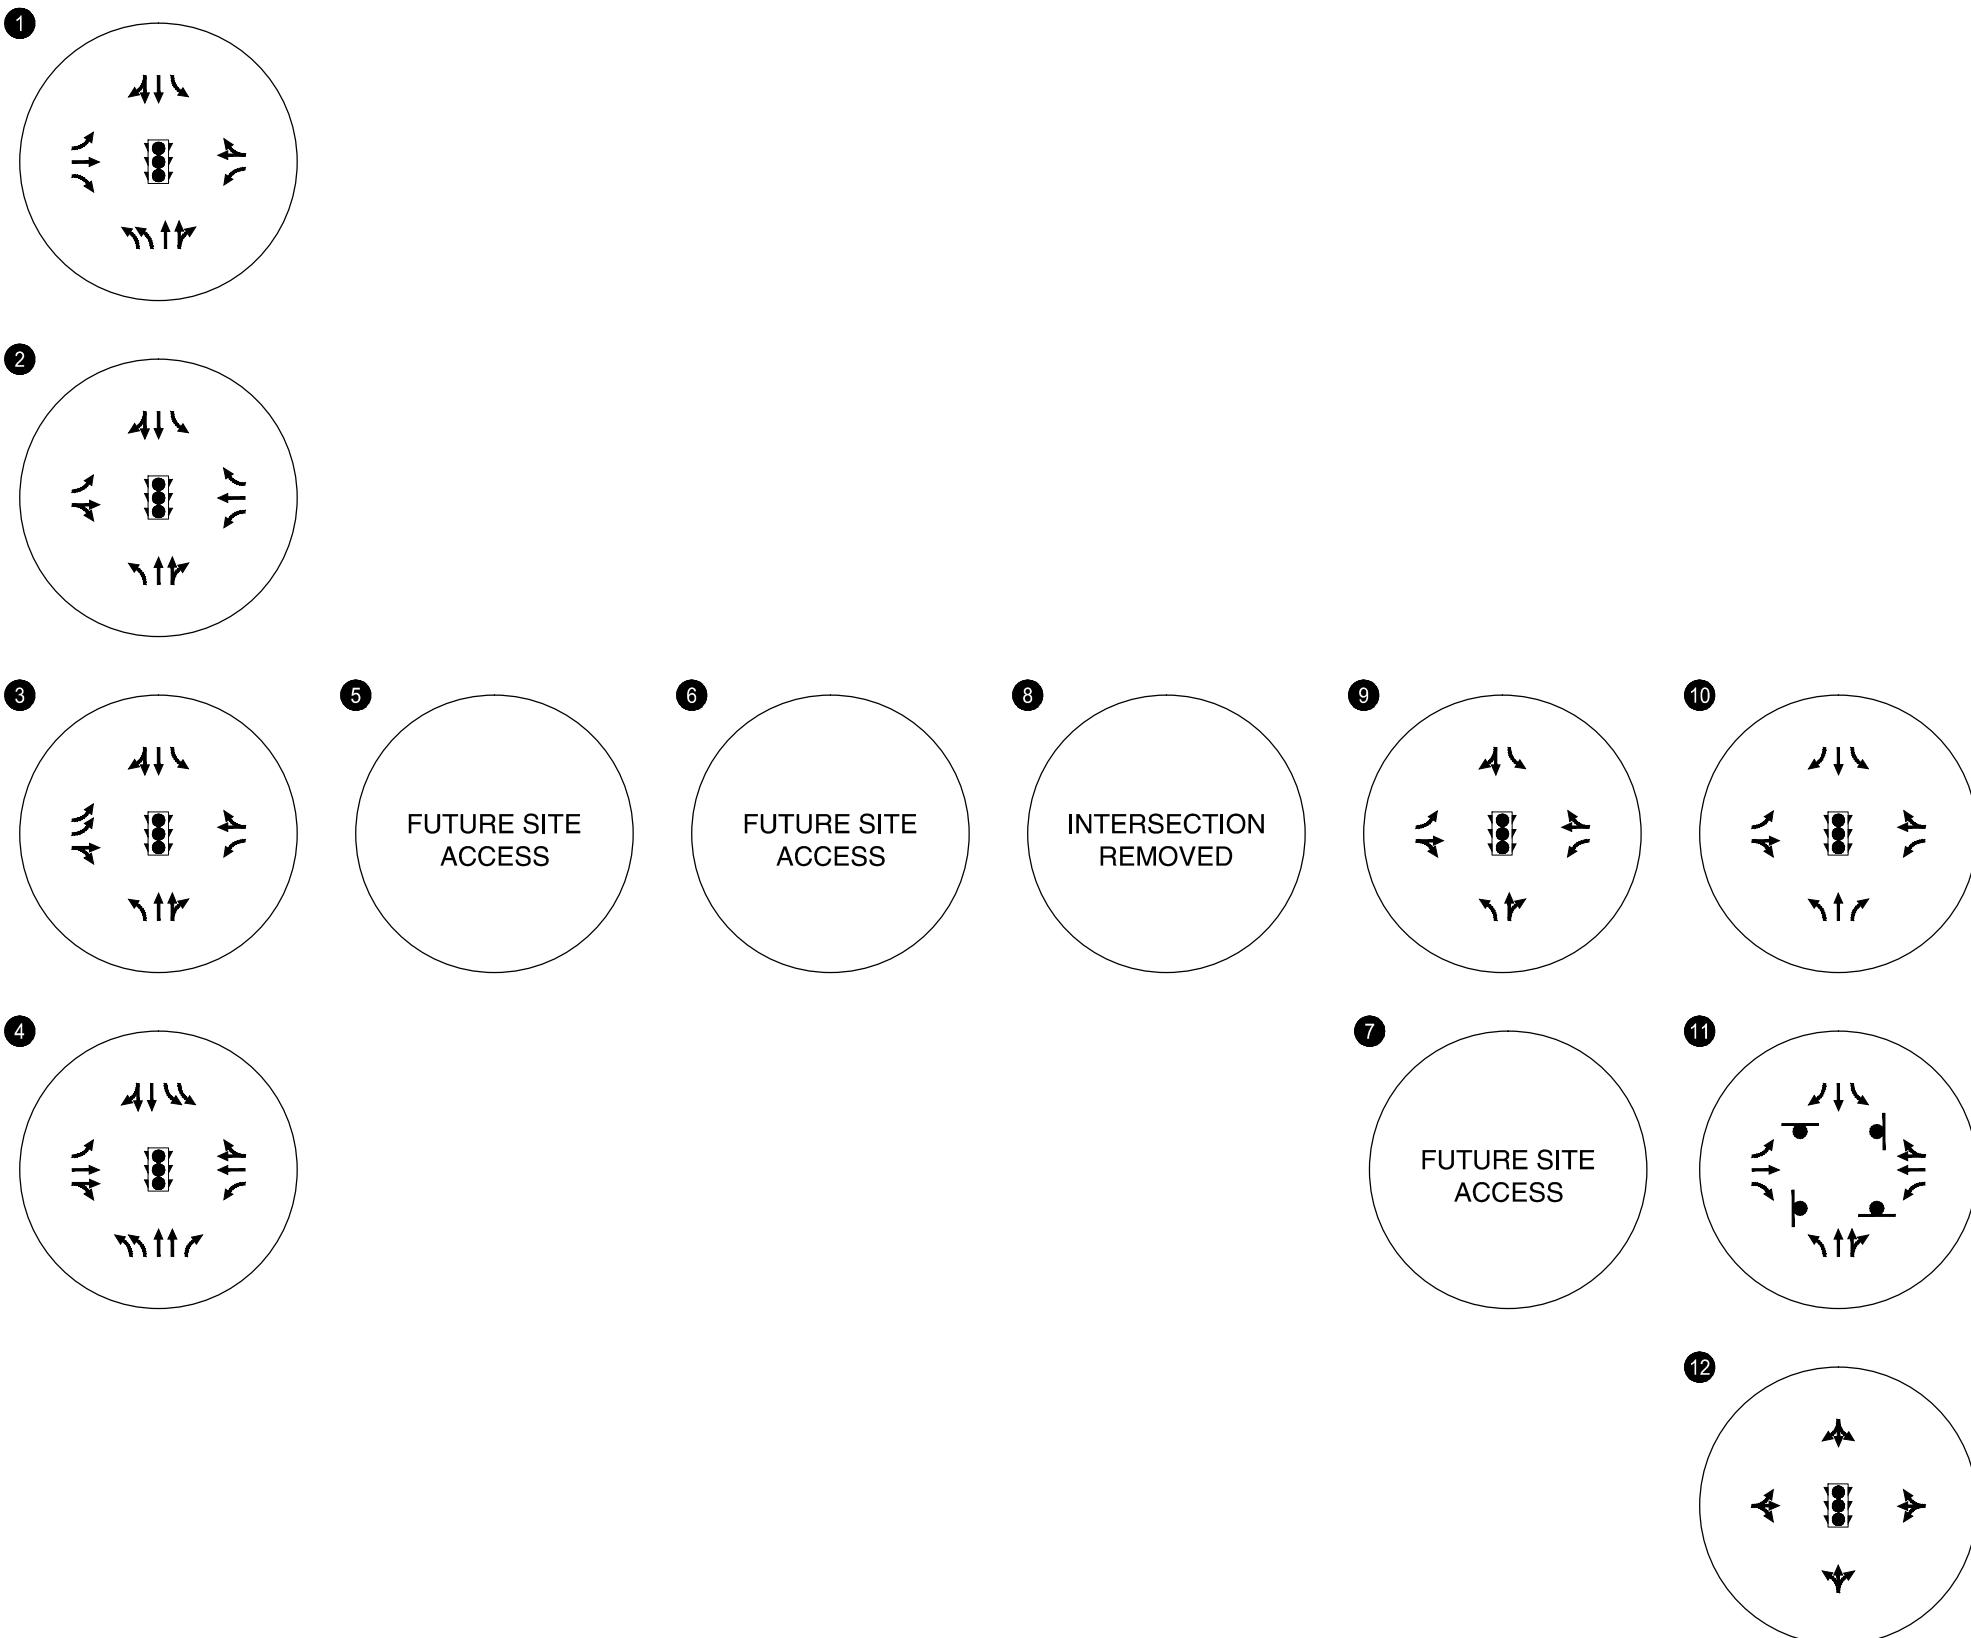

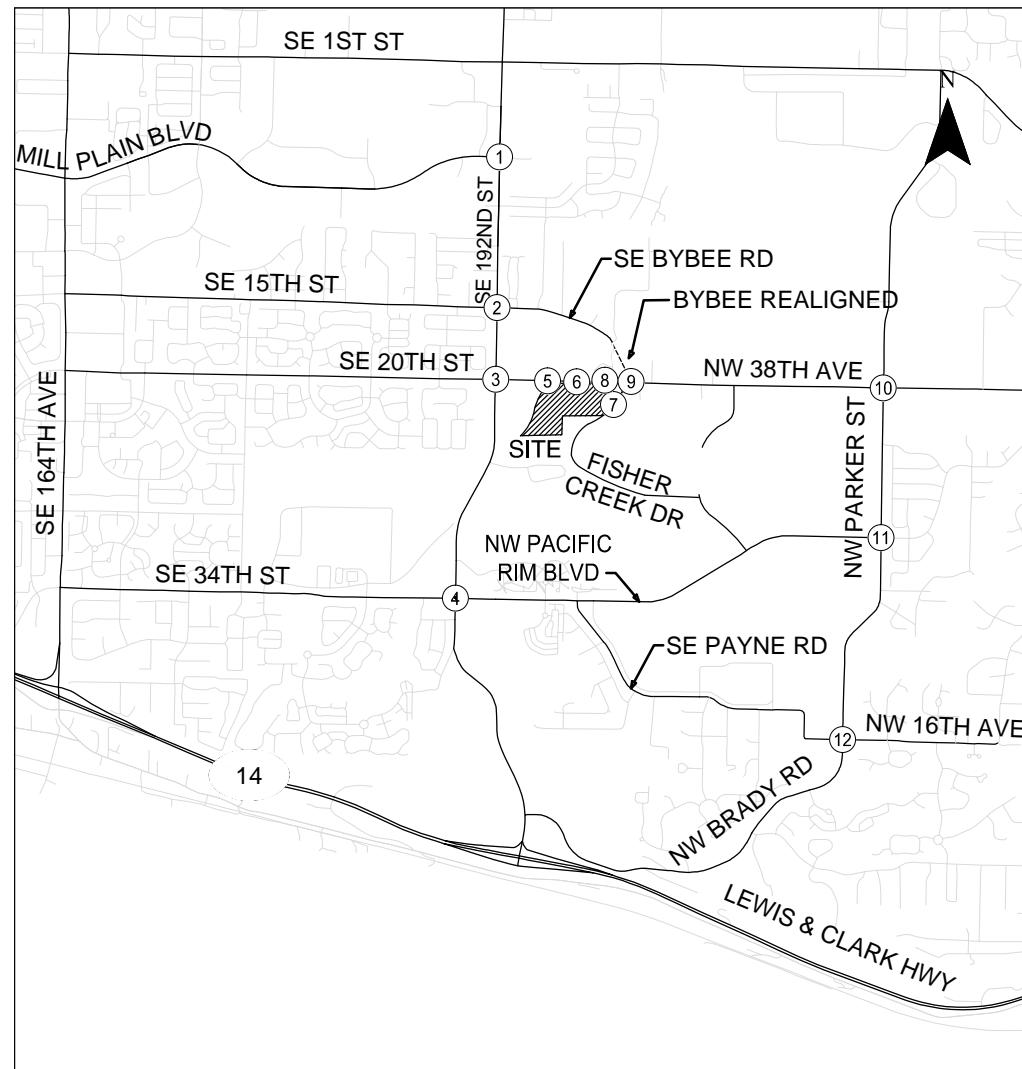

In addition, under both scenarios the NW 16th Avenue/NW Brady Road intersection will be signalized in conjunction with another in-process development. Figures 6 and 7 show the anticipated lane configurations and traffic control devices for Scenarios 1 and 2, respectively.

Scenario 1 (SE Bybee Road aligned at NW Fisher Creek Drive) Background Traffic Conditions

Figures 8 and 9 show the projected 2021 background traffic volumes and operations for the study intersections during the weekday a.m. and p.m. peak hours, respectively. As shown in the figures, all intersections are expected to continue operating acceptably and satisfy the jurisdictional standards of the governing agency. *Appendix "F" includes the 2021 background traffic analysis worksheets.*

Scenario 2 (SE Bybee Road aligned to the east) Background Traffic Conditions

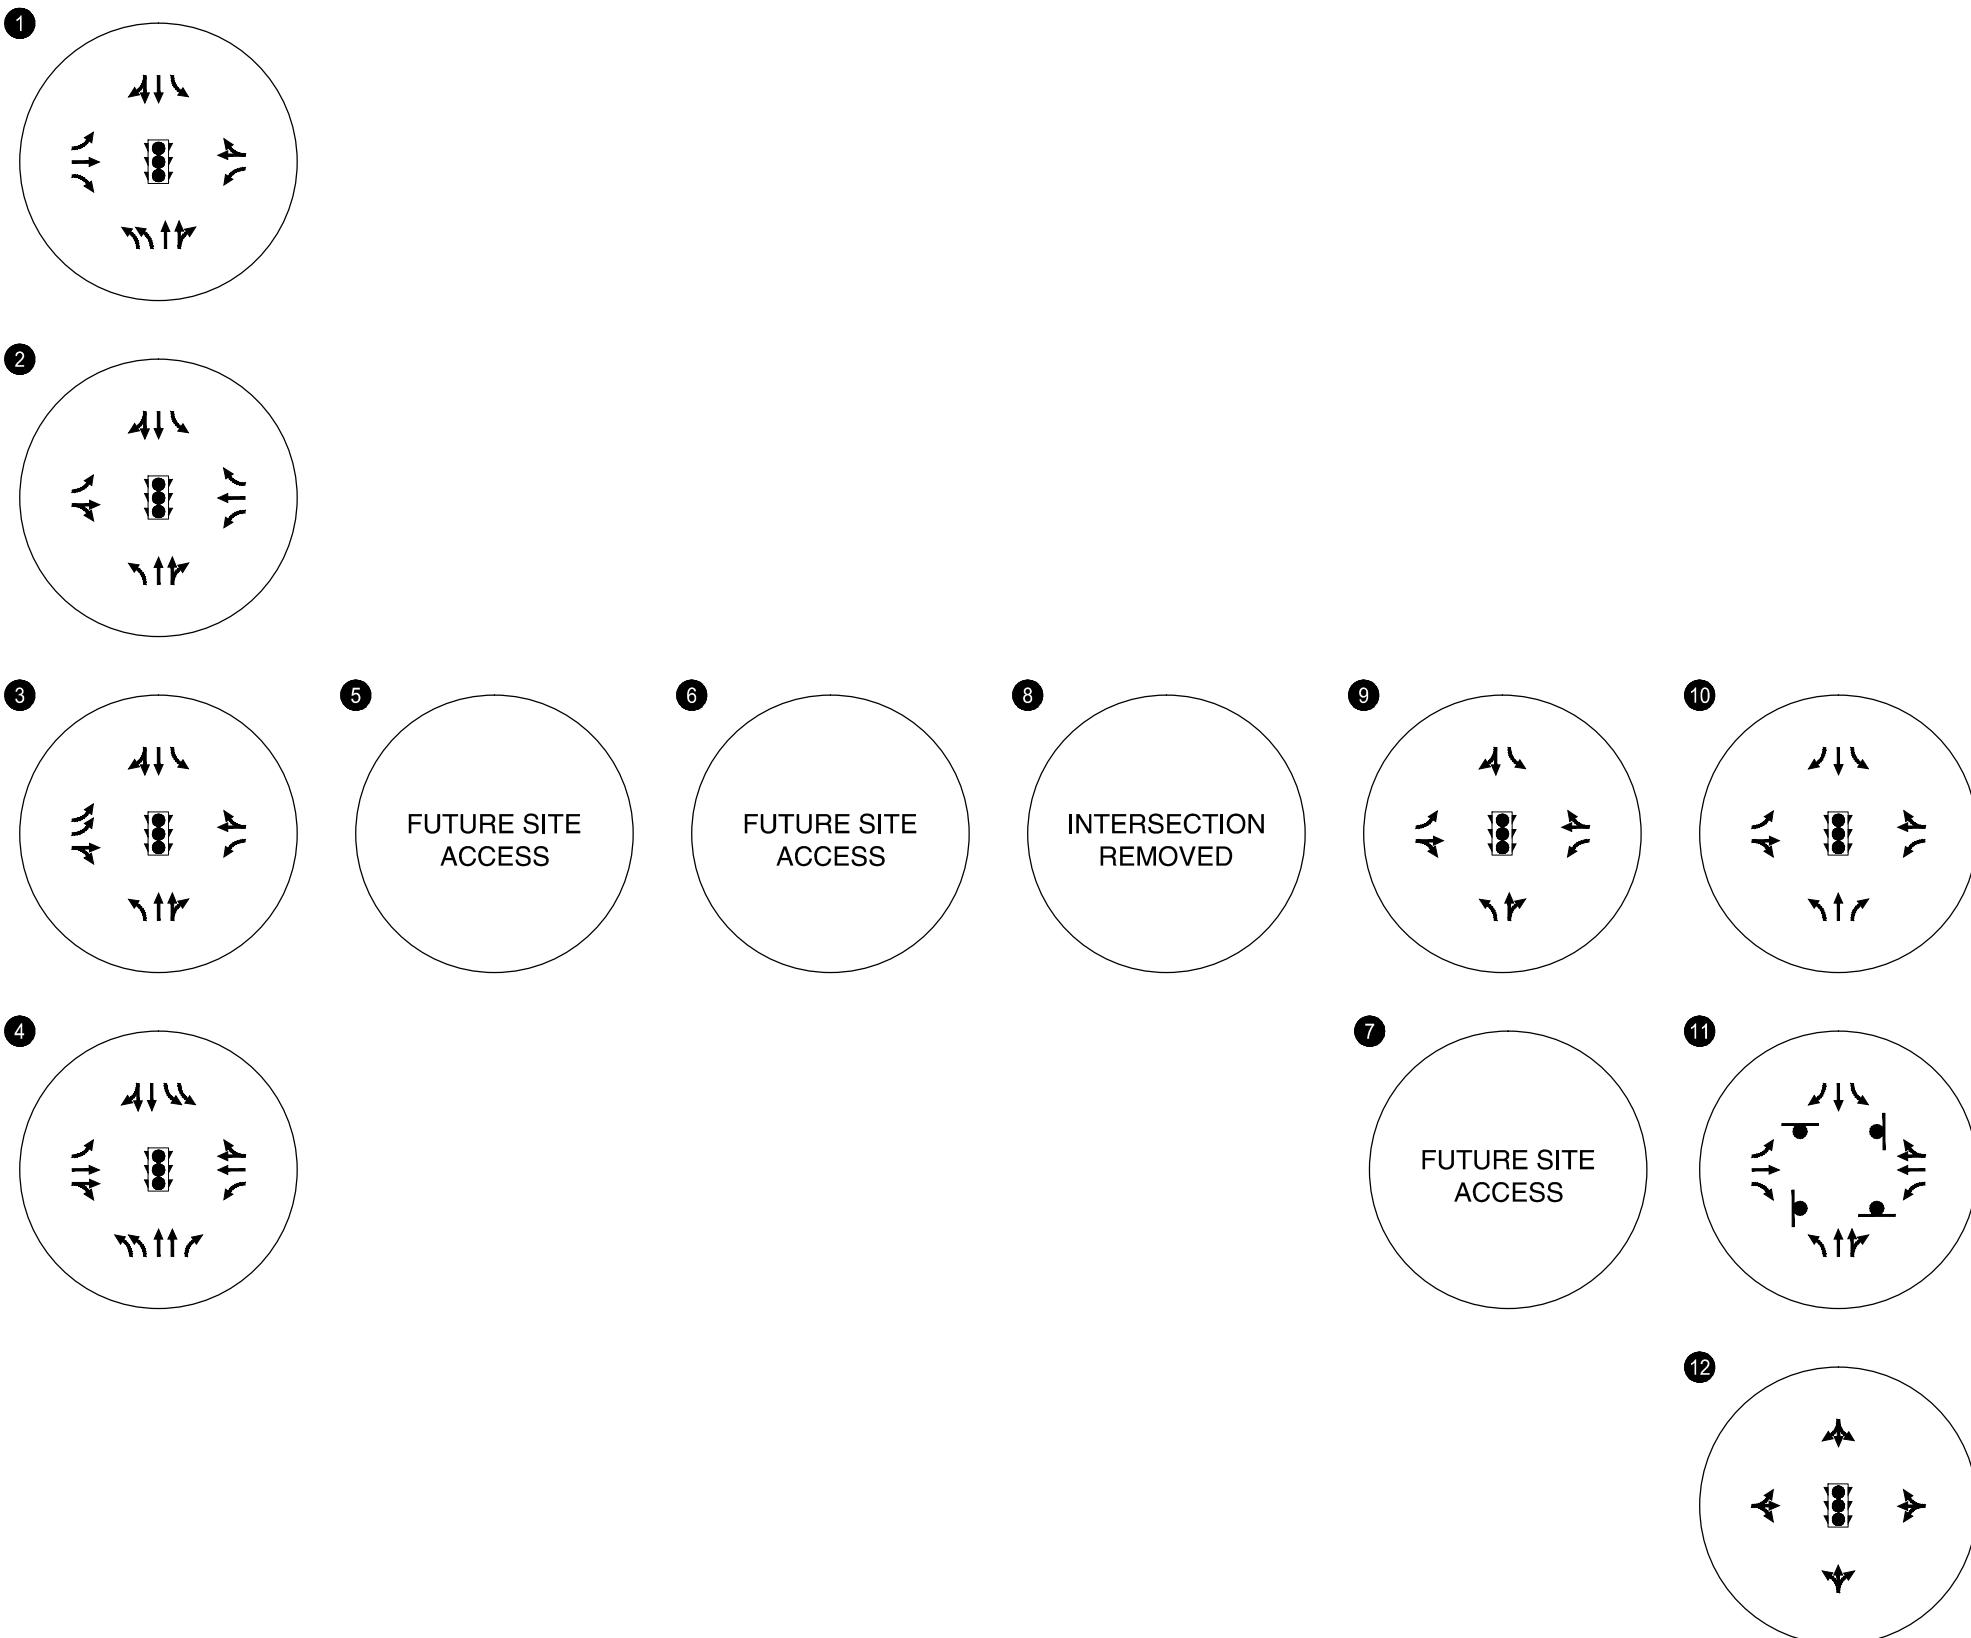

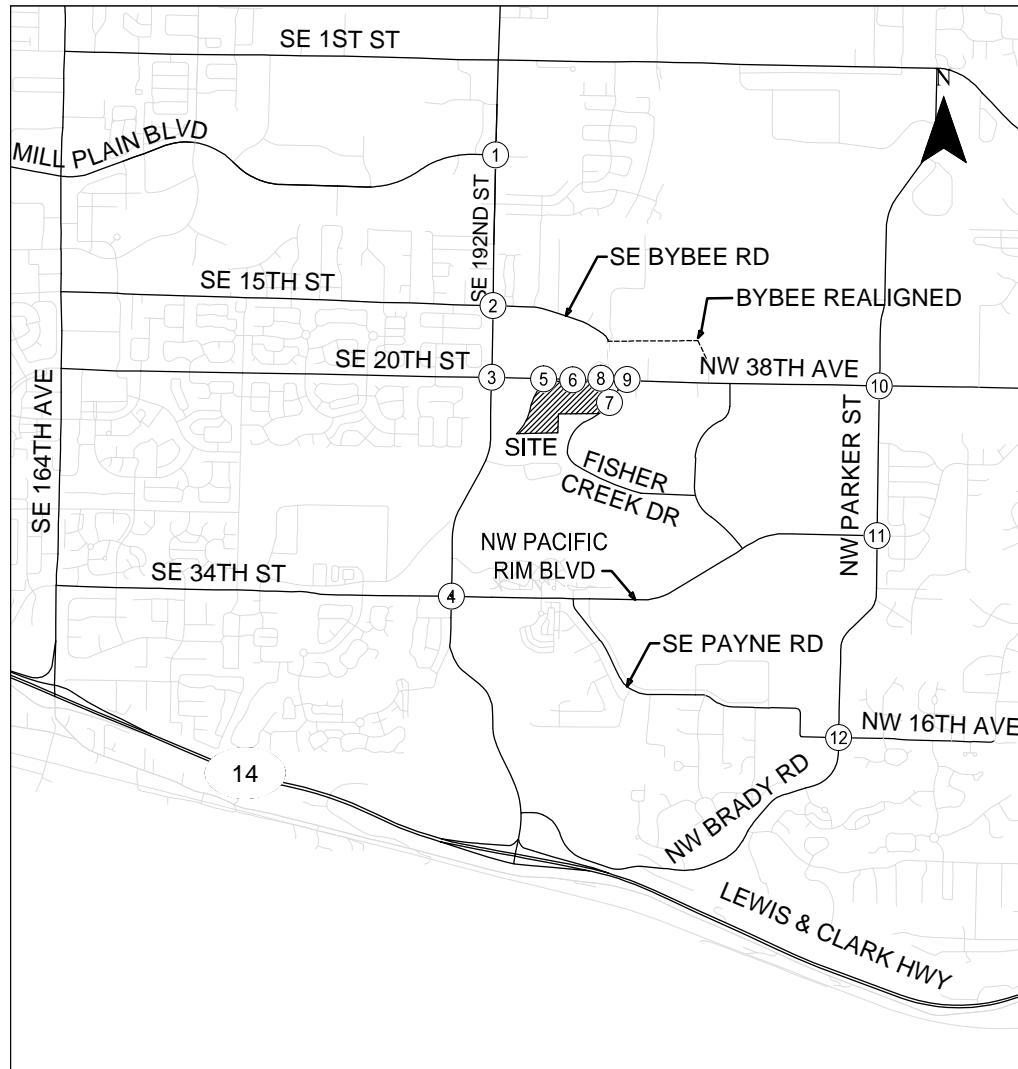

Figures 10 and 11 show the projected 2021 background traffic volumes and operations for the study intersections during the weekday a.m. and p.m. peak hours under Scenario 2. As shown in the figures, the SE 20th Street/SE 192nd Avenue intersection is projected to operate over-capacity and at LOS F during the weekday p.m. peak hour, exceeding City of Vancouver standards. All other intersections are projected to continue operating acceptably and satisfy the jurisdictional standards of the governing agency. *Appendix "F" includes the 2021 background traffic analysis worksheets.*

Proposed Development Plan

The applicant proposes to construct a mixed-use development consisting of up to 276 apartment units, 100,000 square feet of corporate headquarters, 150,000 square feet of general office, and 20,000 square feet of retail split evenly between restaurant and grocery. Access to the development is proposed via two unsignalized driveways on NW 38th Avenue and two unsignalized driveways on NW Fisher Creek Drive south of NW 38th Avenue (and north of the gated entry to the Fisher Investments Campus). The location of the western driveway on NW 38th Avenue is being coordinated with the neighboring Camas Crossing development to align the site driveways.

Other planned transportation improvements associated with the proposed development include a sidewalk along the site frontage on the west side of NW Fisher Creek Drive and a southbound right turn lane into the site at the unsignalized driveway on NW Fisher Creek Drive. Full occupancy of the development is expected to occur by 2021.

Trip Generation

Estimates of average weekday a.m. and p.m. peak hour vehicle trip ends were obtained from the standard reference manual, *Trip Generation, 9th Edition*, published by the Institute of Transportation Engineers (Reference 2). Pass-by rates were developed based on guidance in *Trip Generation Handbook, 3rd Edition* (Reference 3), and trip internalization rates between uses were developed based on guidance in *Trip Generation Handbook, 2nd Edition* (Reference 4) for daily trips, and NCHRP Report 684 (Reference 5) for peak hour trips. Appendix "G" includes the OTISS Traffic software trip internalization calculations. Table 3 summarizes the trip generation for the proposed development.

Table 3: Site Trip Generation Estimate

Land Use Category	ITE Code	Size	Units	Total Daily Trips	Weekday AM Peak Hour			Weekday PM Peak Hour		
					Total	In	Out	Total	In	Out
Residential Apartments	220	276	DU	1,835	141	28	113	171	111	60
				<i>Less Internal Trips</i>	-254	-17	-2	-38	-23	-15
Corporate Headquarters Building	714	100,000	Sq. Ft.	798	152	141	11	141	14	127
General Office Building	710	150,000	Sq. Ft.	1,654	234	206	28	224	38	186
				<i>Less Internal Trips</i>	-124	-40	-21	-12	-2	-10
High-Turnover (Sit-Down) Restaurant	932	10,000	Sq. Ft.	1,272	108	59	49	99	59	40
				<i>Less Internal Trips</i>	-455	-45	-27	-47	-24	-23
				<i>Less Pass-By Trips (21% Daily and AM peak, 43% PM peak)</i>	-172	-12	-6	-22	-11	-11
Supermarket	850	10,000	Sq. Ft.	1,022	34	21	13	95	48	47
				<i>Less Internal Trips</i>	-433	-16	-9	-51	-25	-26
				<i>Less Pass-By Trips (18% Daily and AM peak, 36% PM peak)</i>	-106	-4	-2	-38	-19	-19
				Total Trips	6,581	669	455	730	270	460
				<i>Less Internal Trips</i>	-1,266	-118	-59	-148	-74	-74
				<i>Less Pass-by Trips</i>	-278	-16	-8	-60	-30	-30
				Net New Primary Trips	5,037	535	388	522	166	356

Trip Distribution

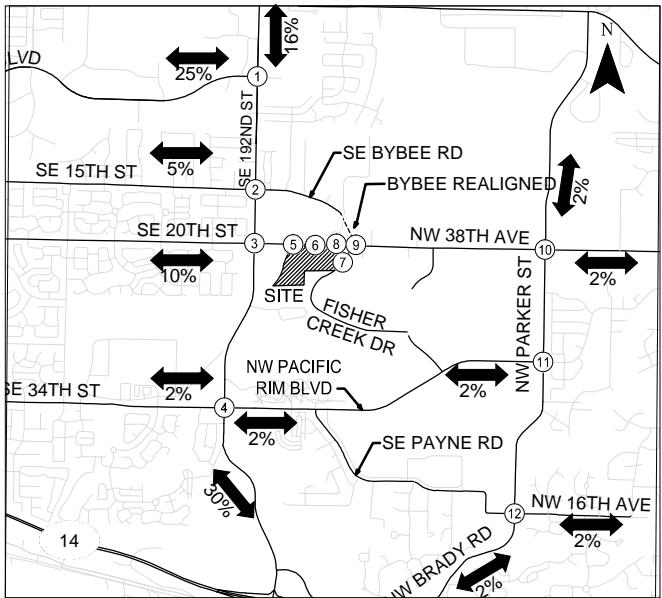

The distribution of site-generated trips onto the study area roadway system was estimated based on a review of surrounding roadway characteristics, existing uses, the 2035 travel demand model maintained by the Southwest Washington Regional Transportation Council (RTC) (select zone analysis of TAZ #651), and other trip distribution patterns used for similar projects in the area.

Three distinct distribution patterns were employed in the analysis (one each for residential, office, and retail uses) recognizing trips associated with each of the land uses will have different travel patterns. For example, some retail trips are likely to be made from employees of existing businesses and homes in the immediate site vicinity given the project location whereas residential trips are likely to travel further to and from the site. Further, the market area for retail uses will be limited to the west where there are multiple competing uses while there is little retail service provided east of the site. Figures 12 and 13 illustrate the three estimated trip distribution patterns.

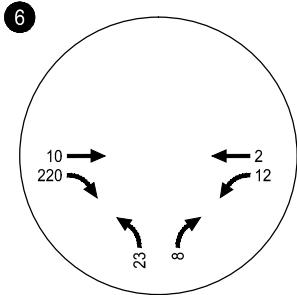

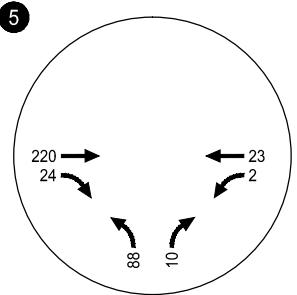

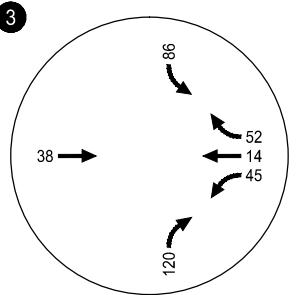

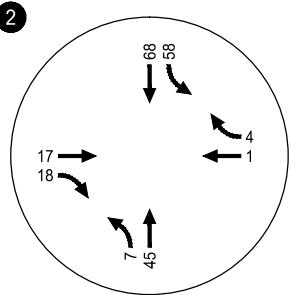

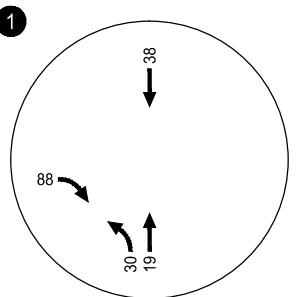

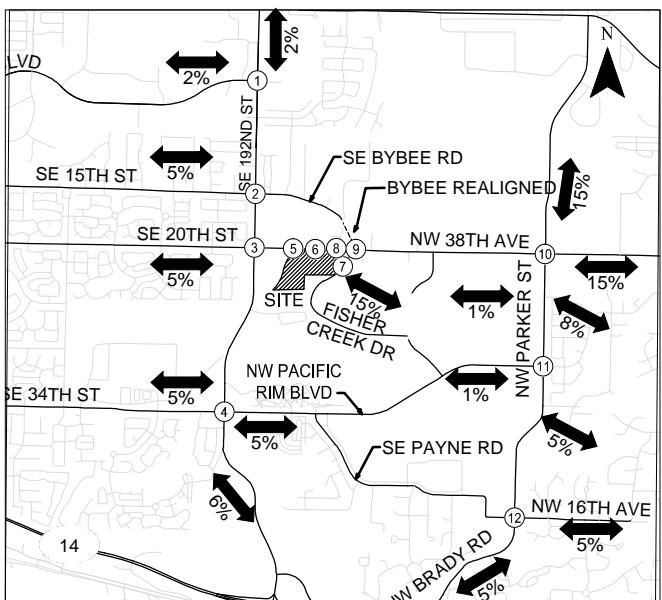

Trip Assignment

The weekday a.m. and p.m. peak hour site trips shown in Table 3 were assigned to the roadway network based on the trip distribution patterns shown in Figures 12 and 13. Figures 12 and 13 also show the a.m. and p.m. peak hour primary trip assignments for site development under Scenario 1. Figures 14 and 15 show the a.m. and p.m. peak hour pass-by trip assignments. New trip assignments under Scenario 2 are shown on Figures 16 and 17 (site pass-by trip assignment remains the same under Scenarios 1 and 2).

Year 2021 Total Traffic Conditions

The total traffic conditions analysis forecasts how the study intersections will operate with the inclusion of site-generated traffic. These future conditions were evaluated for both roadway network scenarios as described below.

Scenario 1 (SE Bybee Road aligned at NW Fisher Creek Drive) Total Traffic Conditions

The total traffic volumes at the study intersections include the 2021 background traffic volumes (Figures 8 and 9), primary site-generated trips (Figures 12 and 13) and pass-by site-generated trips (Figures 14 and 15). Figures 18 and 19 show the 2021 total traffic volumes and operations during the weekday a.m. and p.m. peak hours for Scenario 1.

As shown in Figure 19, the SE 20th Street/SE 192nd Avenue intersection is projected to operate at an unacceptable LOS "F" during the weekday p.m. peak hour. *Appendix "H" includes the year 2021 total traffic analysis worksheets.* All other study intersections are predicted to continue to operate acceptably and satisfy the applicable mobility standards.

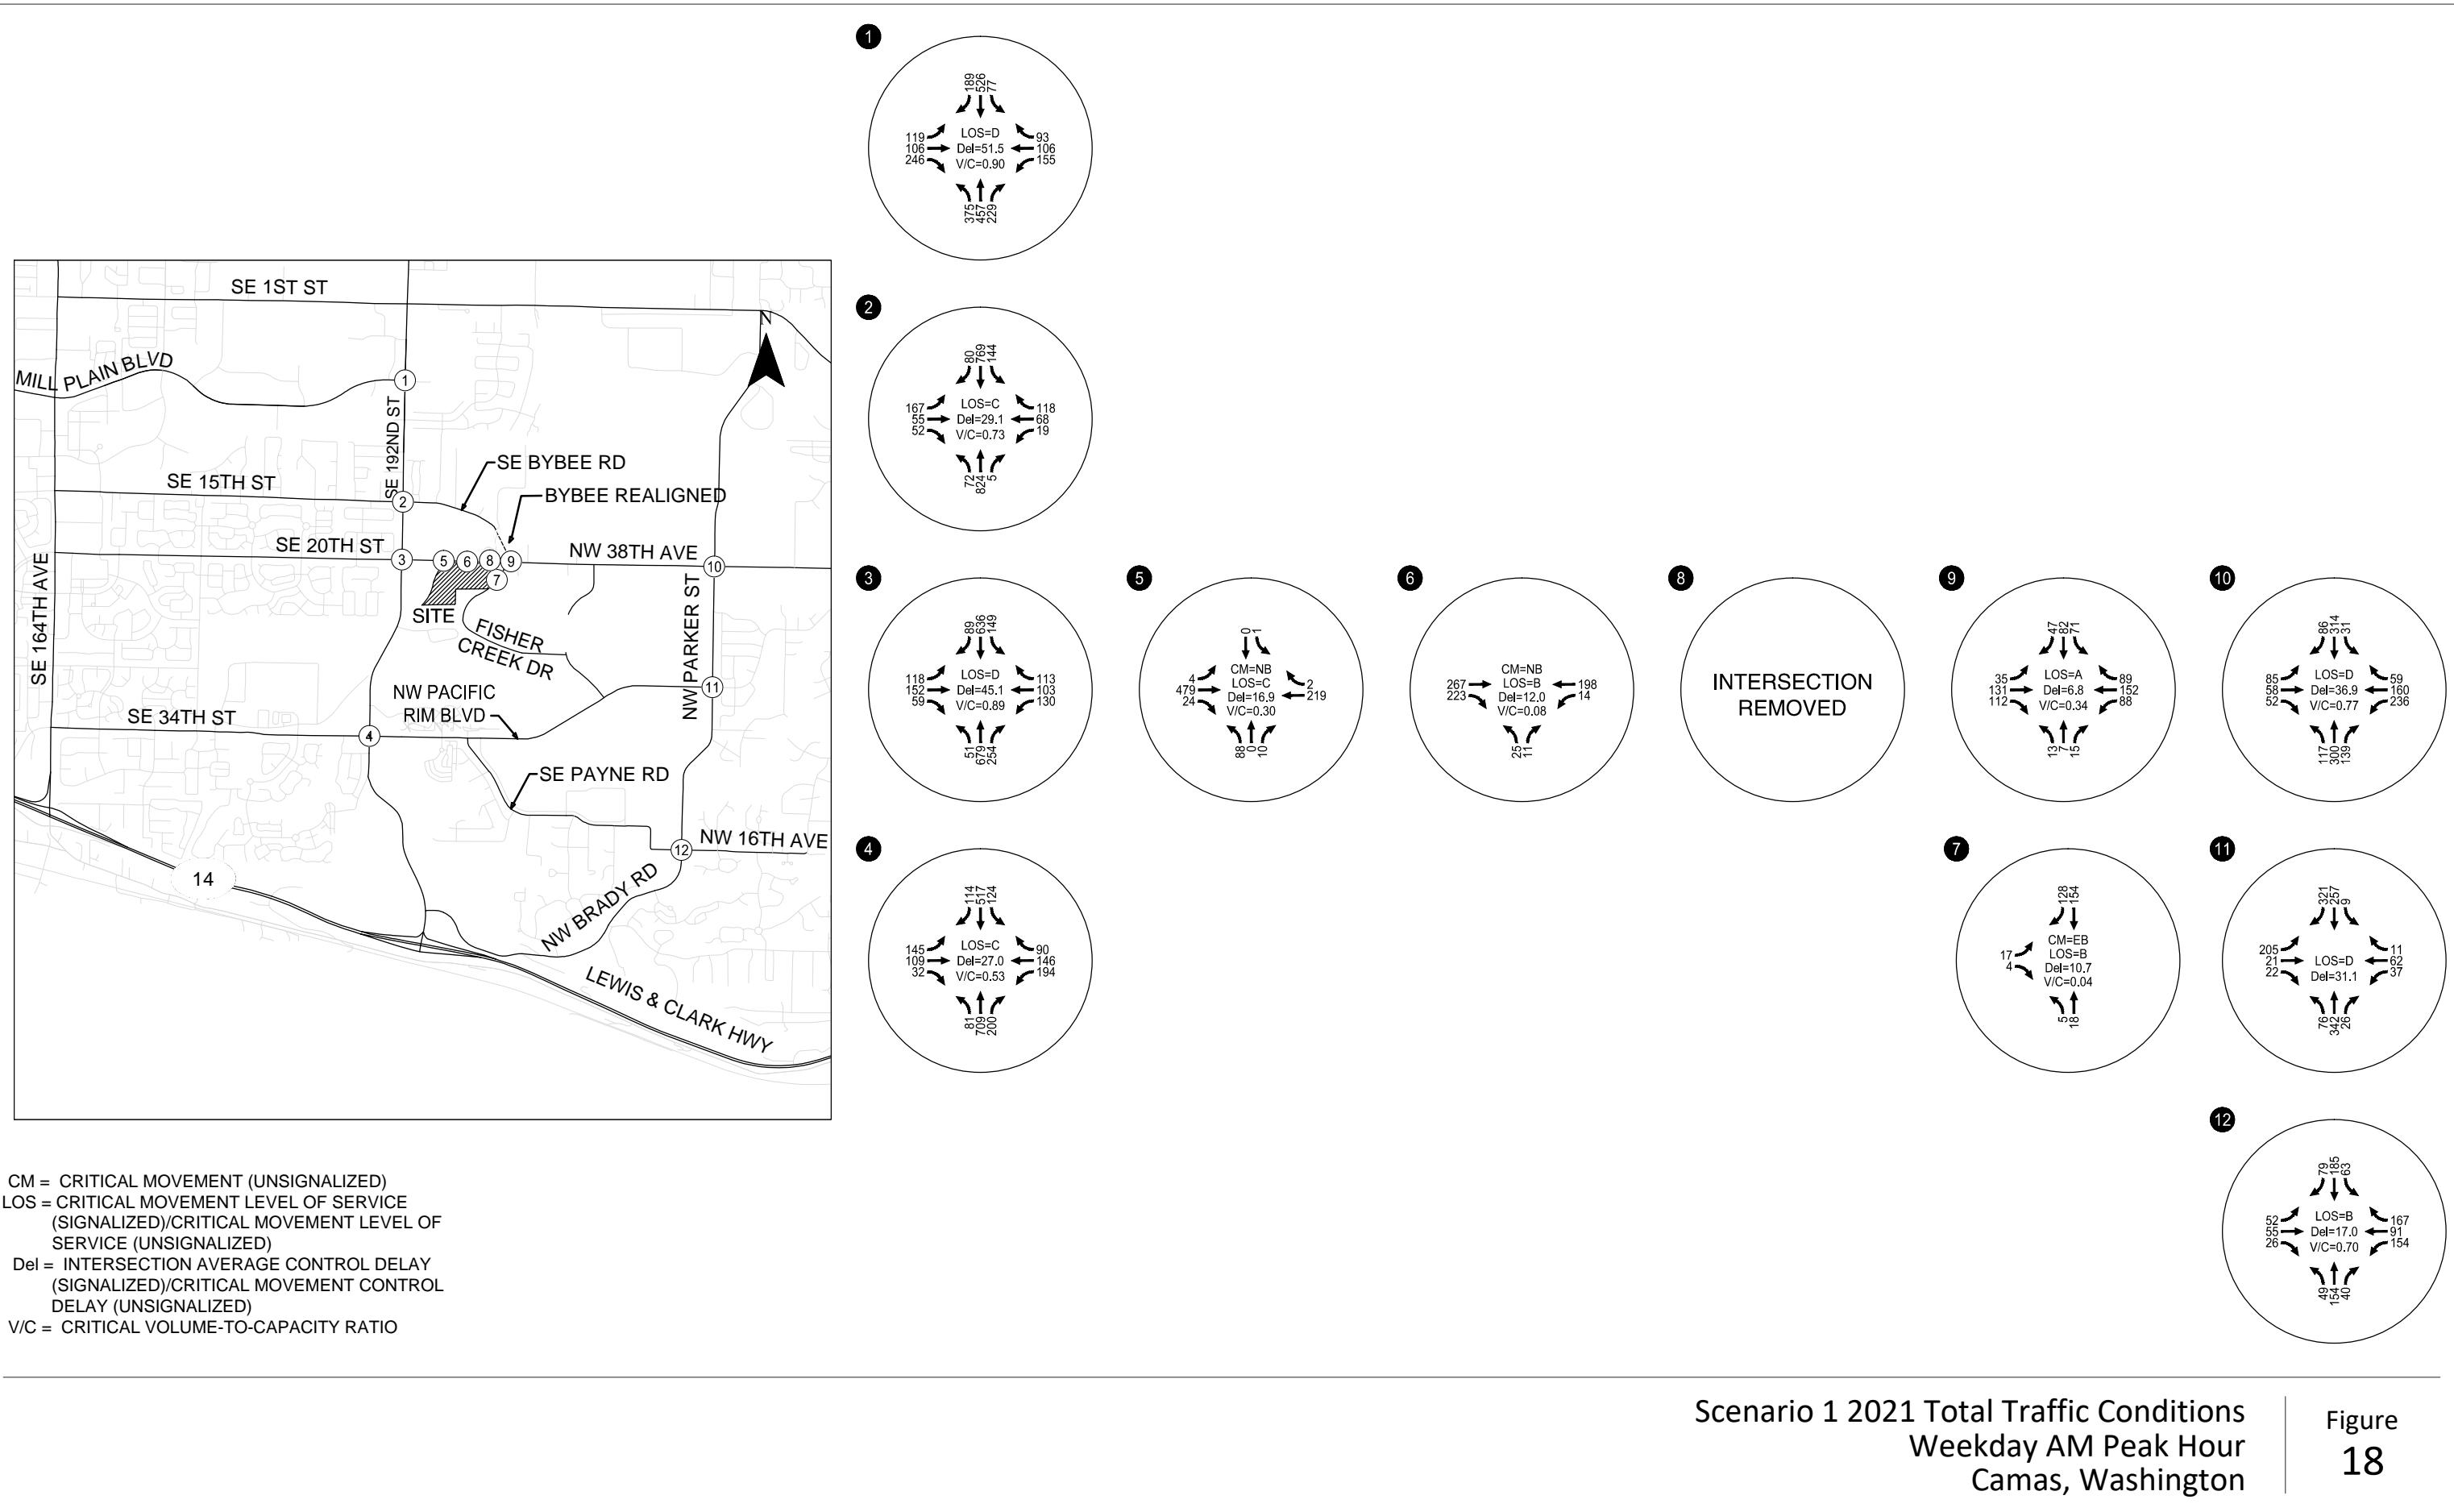

SE 20th Street/SE 192nd Avenue Intersection Mitigation

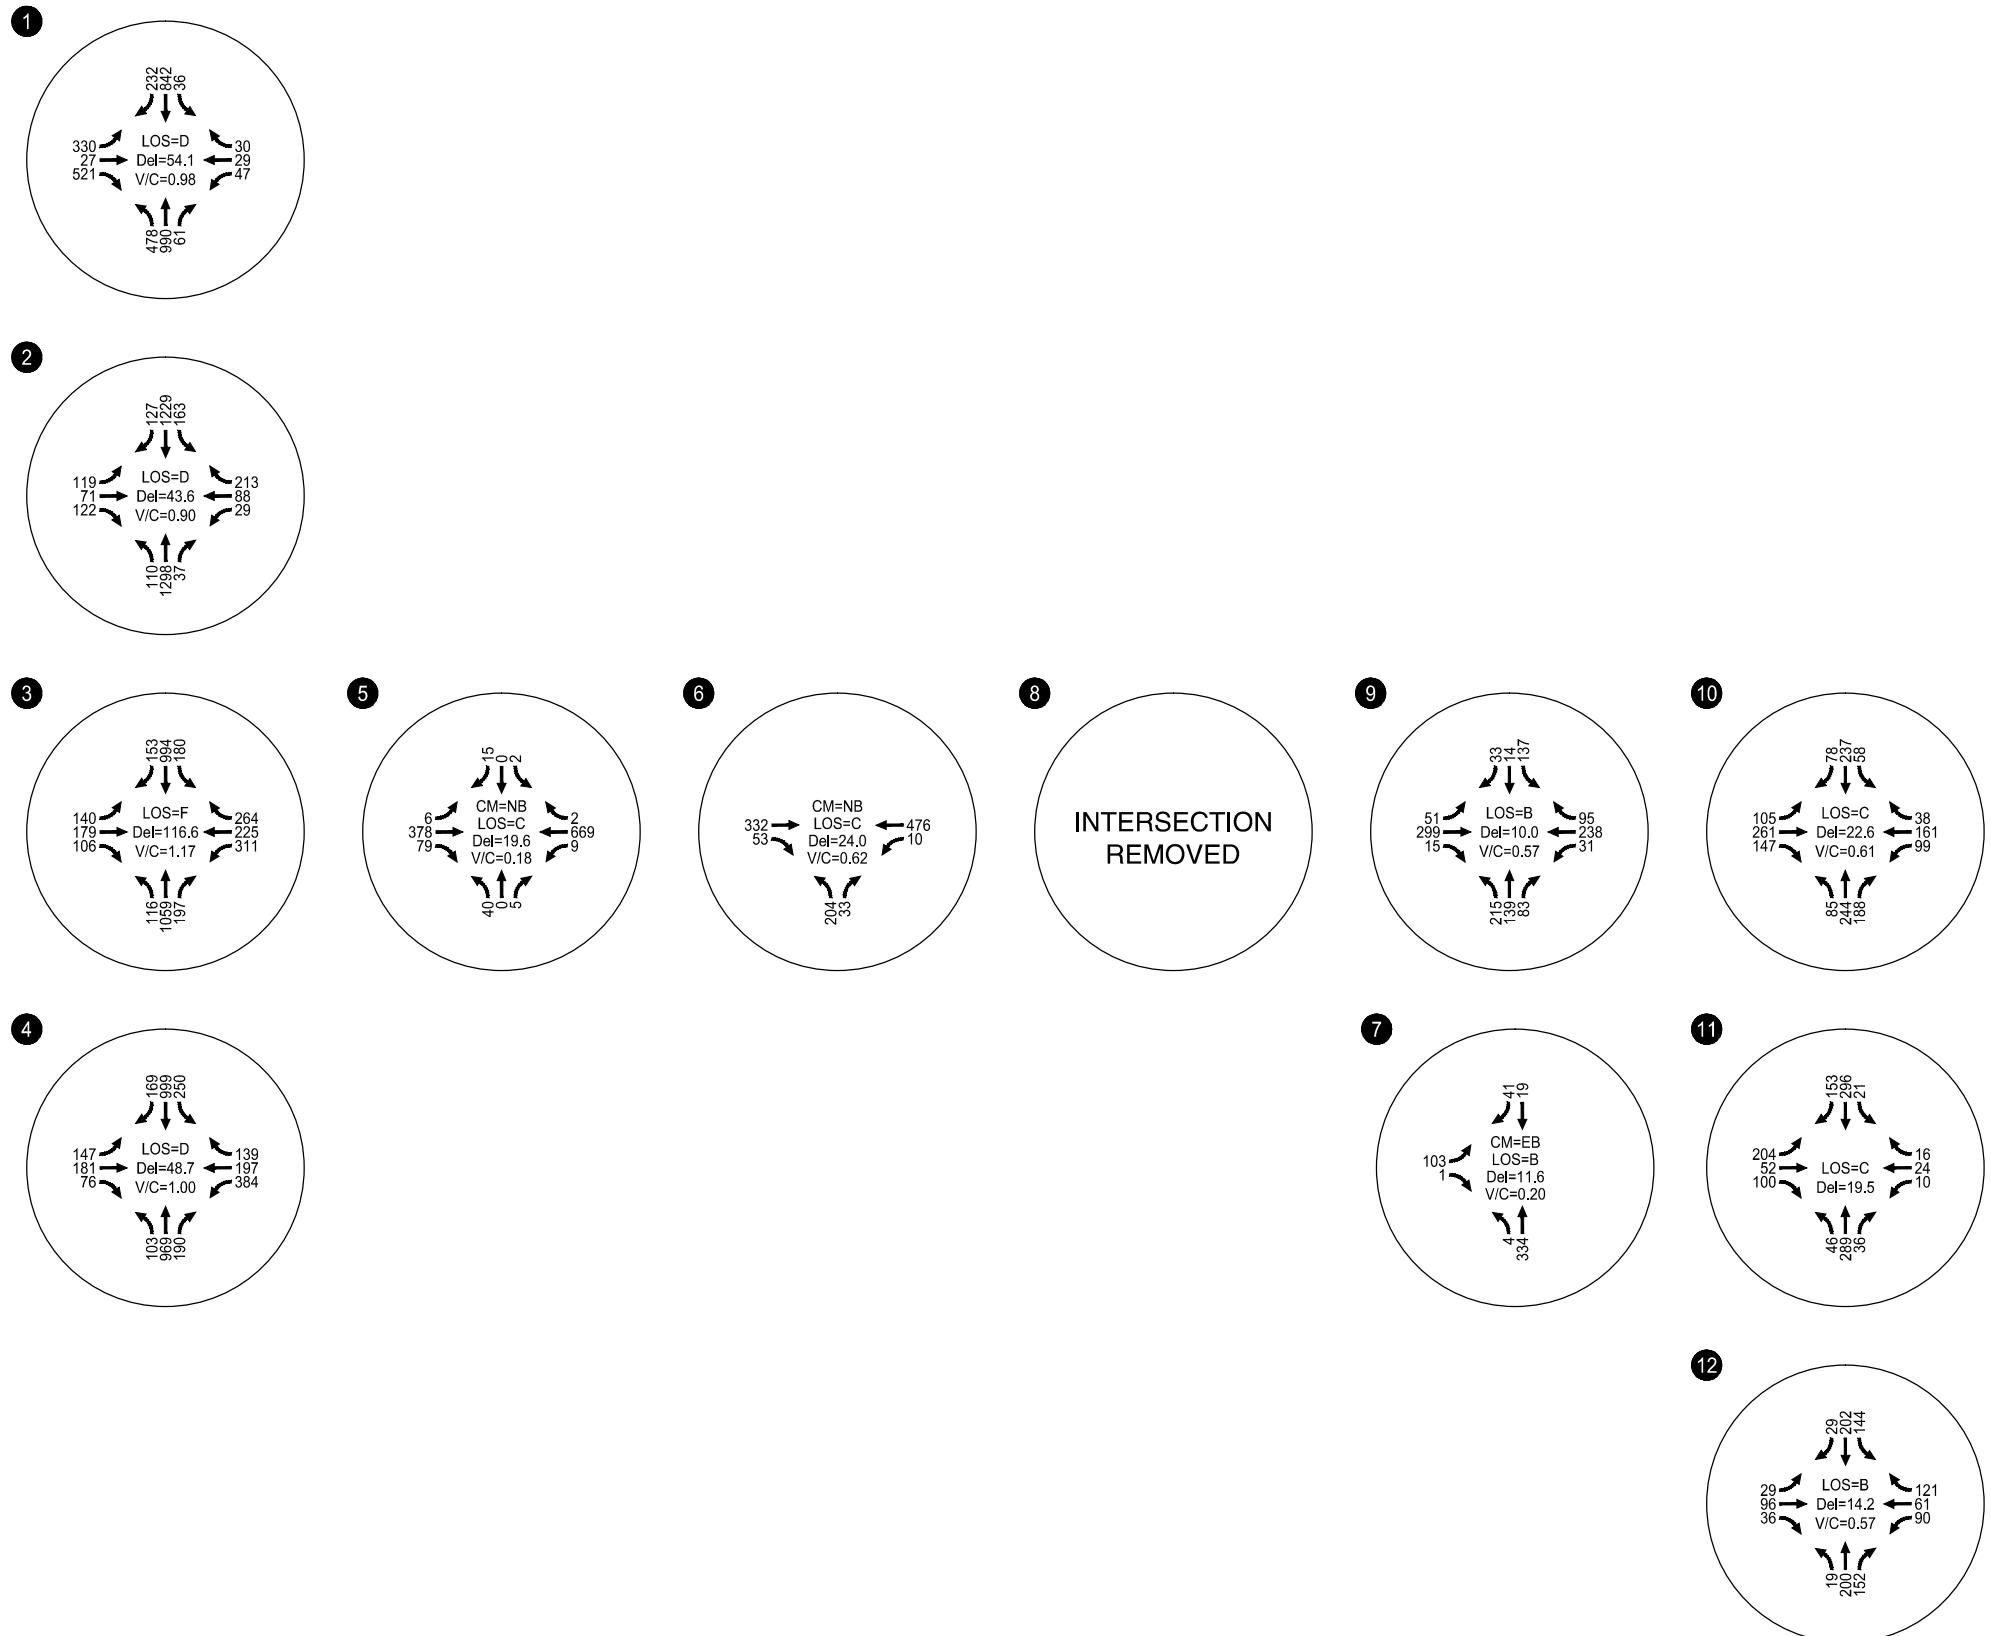

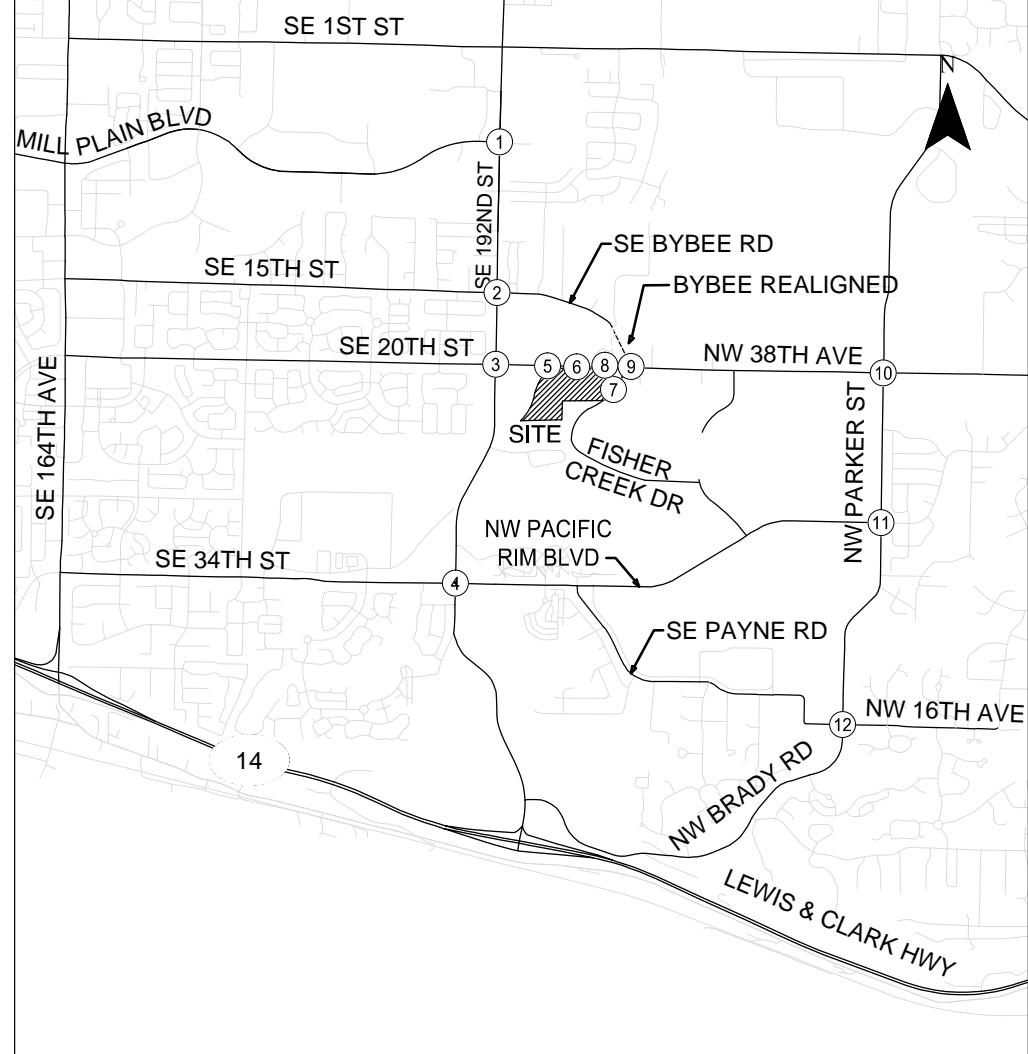

Operations of the SE 20th Street/SE 192nd Avenue intersection could be mitigated to comply with City of Vancouver standards through the addition of a second westbound left-turn lane on SE 20th Street. The additional left-turn lane would add westbound left-turn capacity and allow for traffic signal retiming that allocates additional green time to the primary north-south traffic patterns along SE 192nd Avenue. With this mitigation in place, the intersection is projected to operate at LOS D and a volume to capacity ratio of 1.02 during the weekday p.m. peak hour. *Mitigated operations analysis assuming the additional turn lane and signal retiming for p.m. peak hour conditions is provided at the end of Appendix "H".*

Scenario 2 (SE Bybee Road aligned to the east) Total Traffic Conditions

The Scenario 2 total traffic volumes at the study intersections reflect summation of the 2021 background traffic volumes (Figures 10 and 11), primary site-generated trips (Figures 16 and 17) and pass-by site-generated trips (Figures 14 and 15). Figures 20 and 21 show the 2021 total traffic volumes and operations during the weekday a.m. and p.m. peak hours for Scenario 2.

As shown in the figures, the SE 20th Street/SE 192nd Avenue continues to operate at an unacceptable level based on the City of Vancouver standards during the weekday p.m. peak hour. Compared to Scenario 1, the intersection experiences higher traffic volumes and delay. The other study intersections are projected to continue to operate acceptably and satisfy the applicable mobility standards. *Appendix "H" includes the year 2021 total traffic analysis worksheets.*

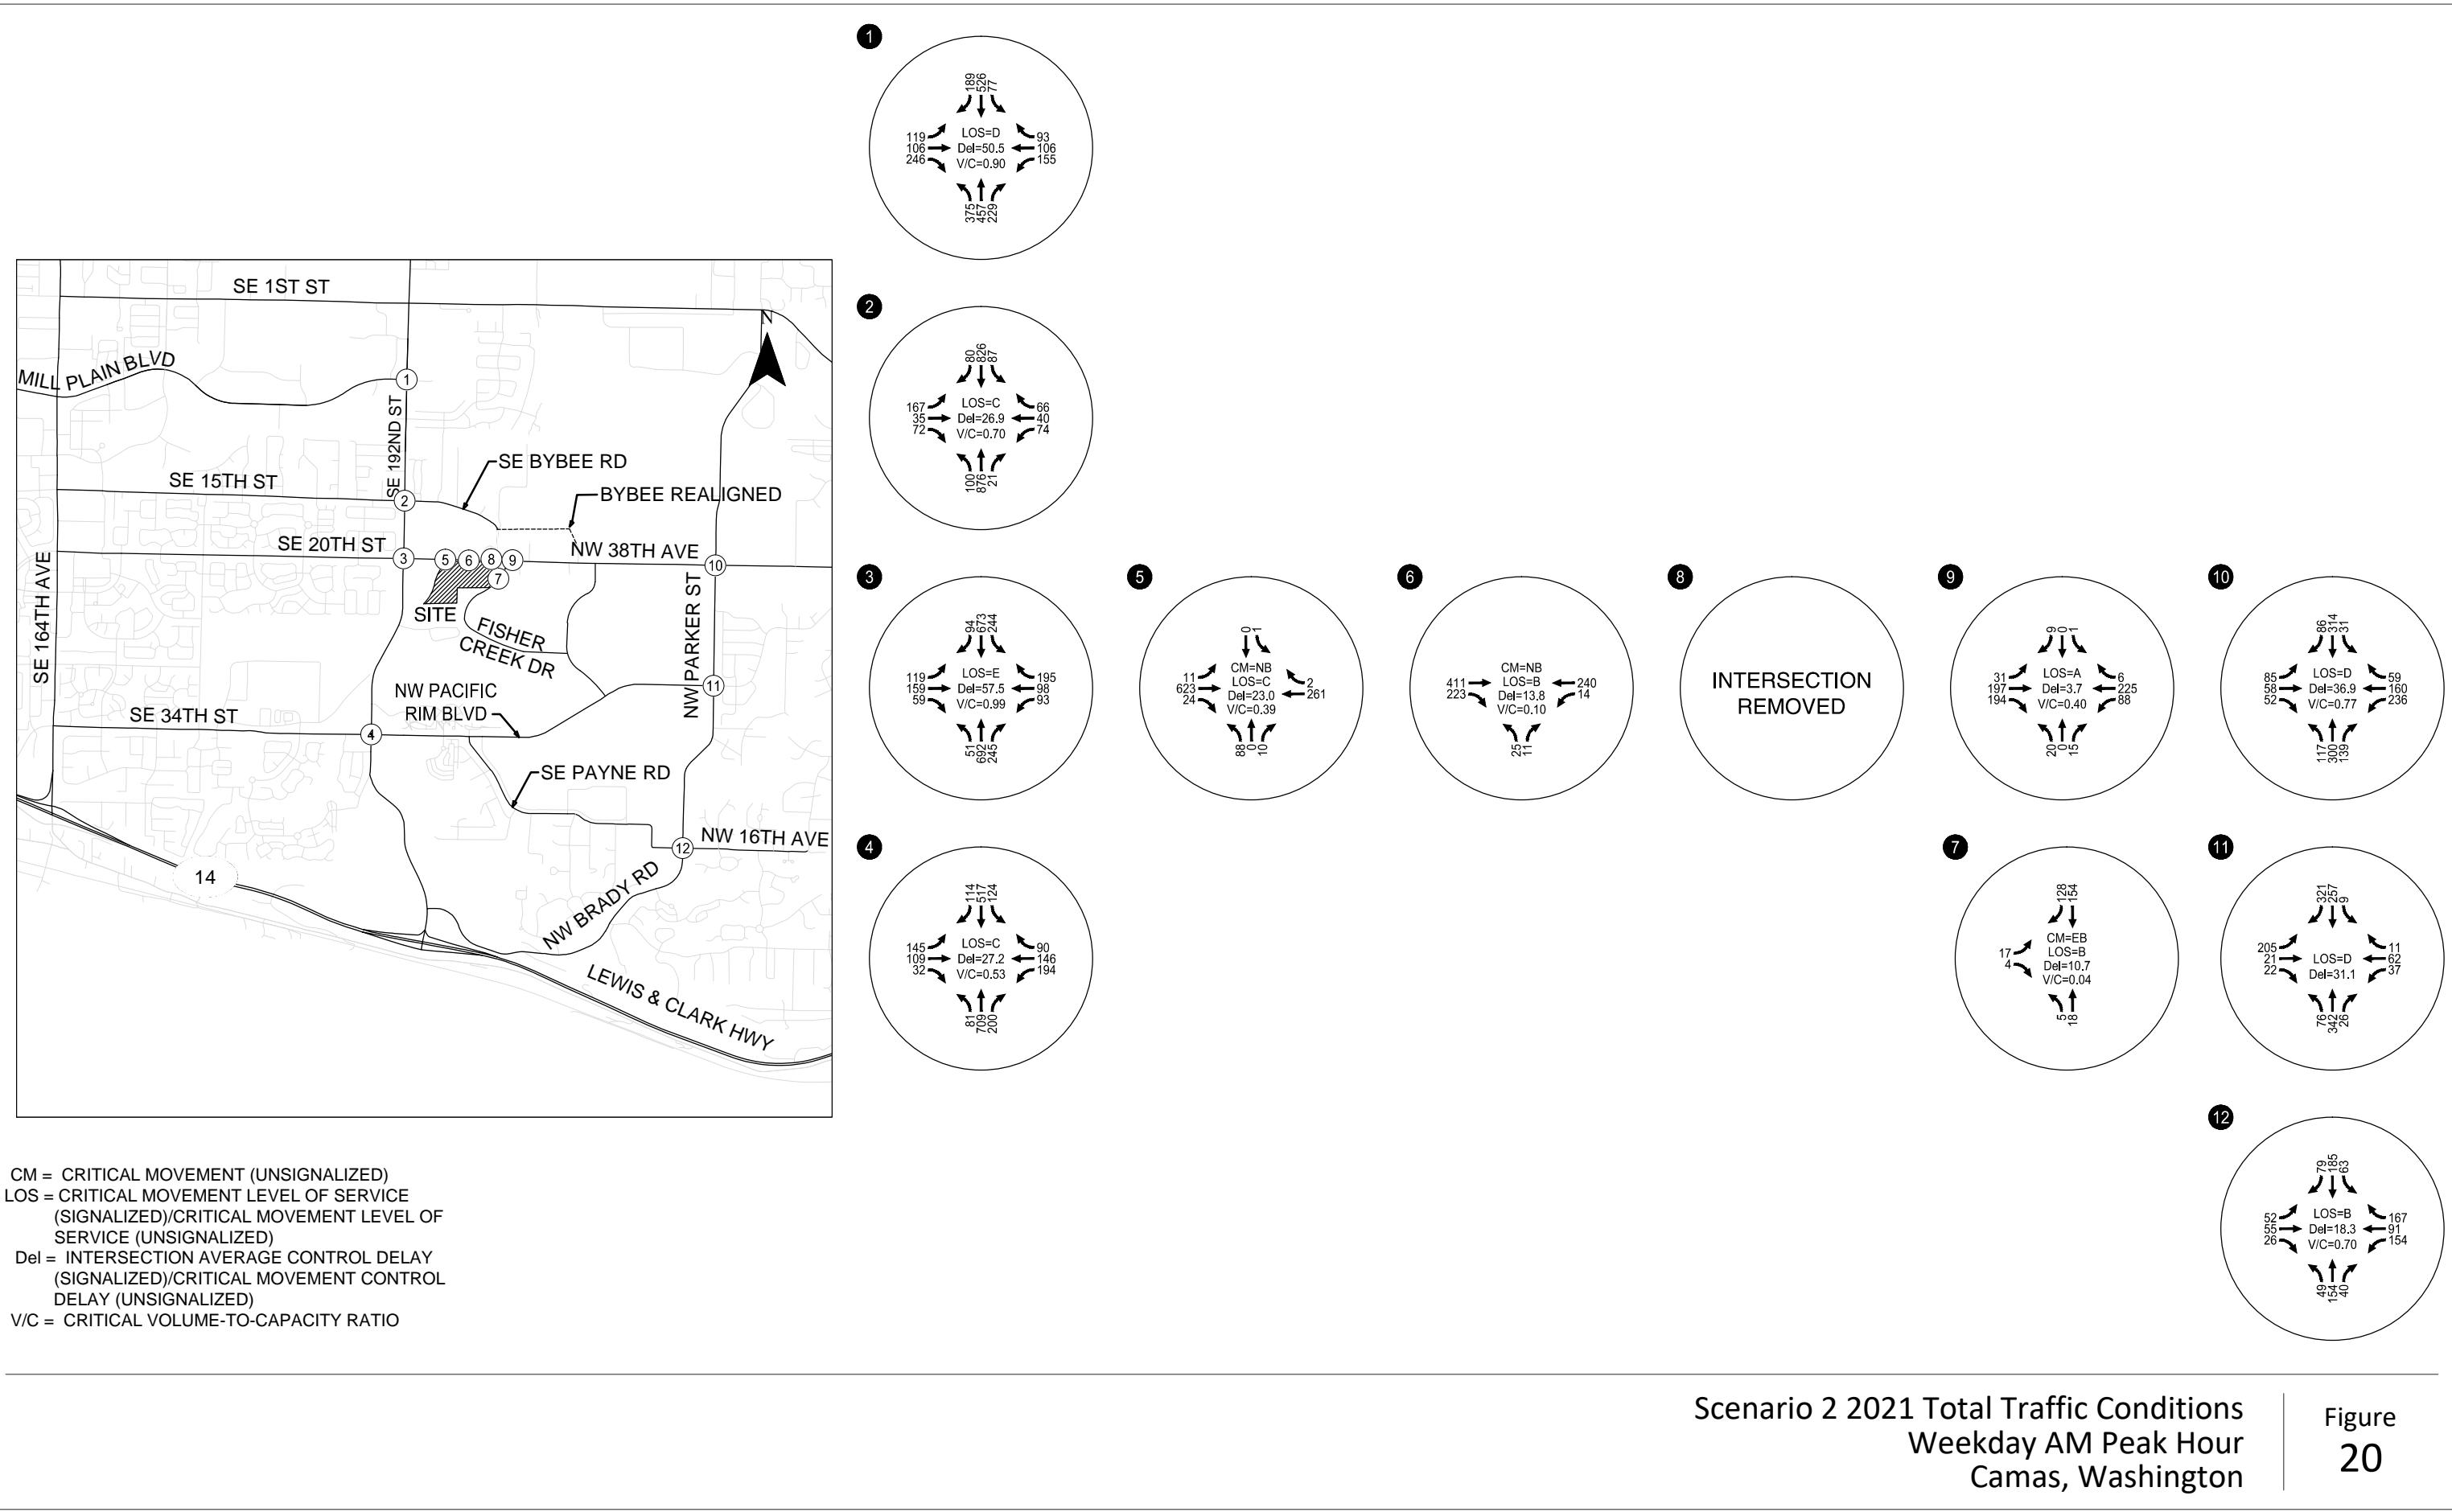

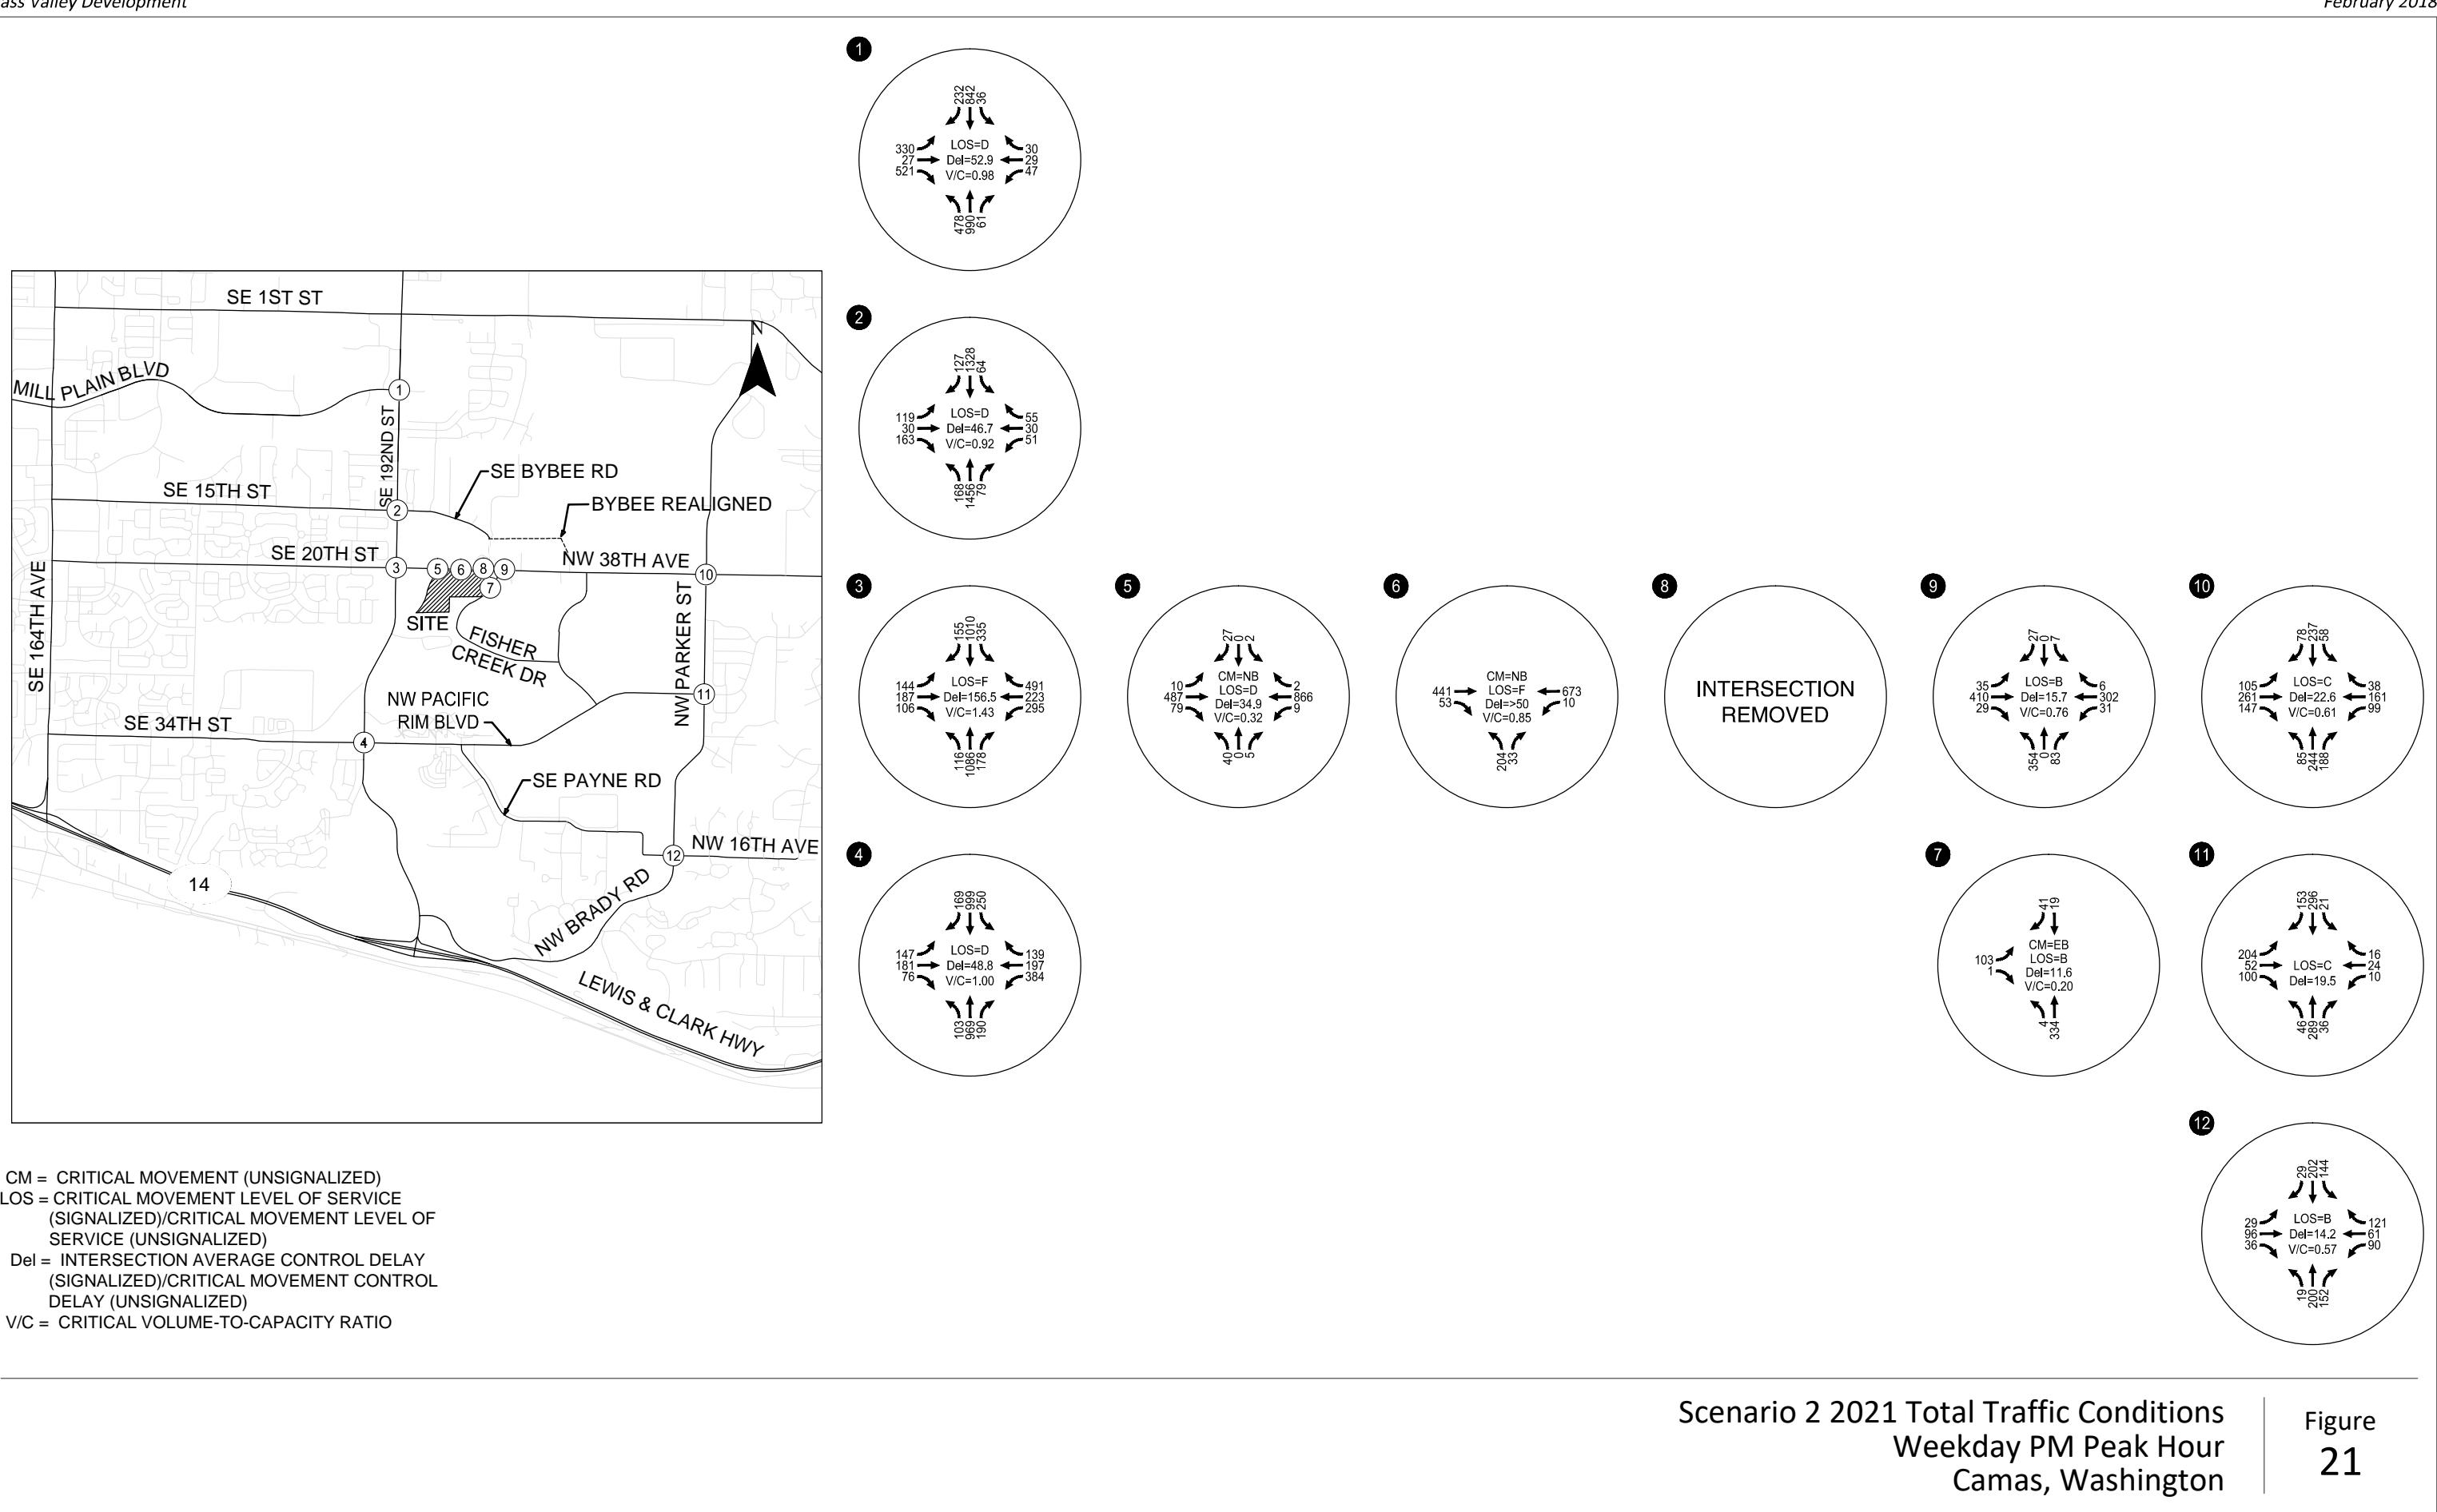

CM = CRITICAL MOVEMENT (UNSIGNALIZED)
 LOS = CRITICAL MOVEMENT LEVEL OF SERVICE

 DELAY (UNSIGNALIZED)
 V/C = CRITICAL VOLUME-TO-CAPACITY RATIO

Scenario 1 2021 Total Traffic Conditions
 Weekday PM Peak Hour
 Camas, Washington

Figure
 19

SE 20th Street/SE 192nd Avenue Intersection Mitigation

Mitigation of the SE 20th Street/SE 192nd Avenue intersection under Scenario 2 requires the addition of a second westbound left-turn lane as well as a separate westbound right-turn lane. Similar to Scenario 1, the additional westbound approach capacity would allow for traffic signal retiming that allocates additional green time to the primary north-south traffic patterns along SE 192nd Avenue. These mitigations would restore intersection operations to a level in compliance with City of Vancouver standards. *Mitigated intersection operations analysis for Scenario 2 is provided at the end of Appendix "H".*

While not required to mitigate the traffic impacts of the proposed development, intersection operations could be further enhanced through provision of a westbound right-turn traffic signal overlap phase for the new westbound right-turn lane.

Queueing Analysis

Site Driveways

A 95th-percentile queueing analysis was performed for the three proposed site access points along NW 38th Avenue and Fisher Creek Driver under 2021 peak hour total traffic conditions. Table 5 summarizes the 95th-percentile queue estimates for the stop controlled approaches, rounded up to the nearest single vehicle length (estimated at 25 feet).

Table 5: 95th-Percentile Queue Analysis Findings (2021 Total Traffic Conditions)

Intersection		Movement	Available Storage (feet)	Scenario 1		Scenario 2	
				AM Peak Hour Queue (feet)	PM Peak Hour Queue (feet)	AM Peak Hour Queue (feet)	PM Peak Hour Queue (feet)
5	NW 38 th Avenue/ Proposed Site Driveway 1	Westbound Left		0	25	0	25
		Northbound		50	25	50	50
6	NW 38 th Avenue/ Proposed Site Driveway 2	Westbound Left		25	25	25	25
		Northbound		25	125	25	200
7	Fisher Creek Drive/ Proposed Site Driveway 3	Eastbound		25	25	25	25

Site driveway queues are projected to be longer under Roadway network Scenario 2, reflecting the projected increase in east-west traffic volumes on NW 38th Avenue along the site frontage as compared to Scenario 1.

As Table 5 indicates, the 95th-percentile queue for the northbound approach at the NW 38th Avenue/Proposed Site Driveway 2 intersection is expected to reach five car lengths under Scenario 1 and eight car lengths under Scenario 2. While the queuing condition will occur on-site and not impact the public roadway approaches, the on-site queuing could be reduced through provision of a shared through/left-turn lane and a separate right-turn lane northbound at the eastern site driveway on NW

38th Avenue. As the site plan is finalized, it is recommended that the site plan provide adequate storage for each of the stop controlled approaches.

SE 192nd Avenue/SE 20th Street Intersection

Table 6 summarized projected queues at the signalized SE 192nd Avenue/SE 20th Street intersection for both Scenarios 1 and 2 assuming provision of the previously recommended mitigation measures. *A more detailed summary of the queue results is provided within the LOS worksheets for this intersection in Appendix "H".*

Table 6: SE 192nd Avenue/SE 20th Street Intersection 95th-Percentile Queue Analysis Results (2021 Total Traffic Conditions)

Approach	Movement	Storage ¹	Scenario 1		Scenario 2	
			AM Peak Hour Queue (ft)	PM Peak Hour Queue (ft)	AM Peak Hour Queue (ft)	PM Peak Hour Queue (ft)
Eastbound	Left	100'	68	104	68	96
	Through-Right	230'/825'	191	296	199	372
Westbound	Left	100'	174	166	113	188
	Through	325'/2,110'	172	517	222	227
	Right	200'				386
Northbound	Left	325'	65	137	65	125
	Through-Right	190'/1,285'	440	584	444	590
Southbound	Left	400'	235	154	408	253
	Through-Right	1080'	235	312	265	284

¹When two storage lengths are shown, the first measurement represents distance to nearest driveway intersection and the second measurement represents distance to nearest street intersection.

Driveway Sight Distance Considerations

Access to the development is proposed via two full-access, stop-controlled driveways on NW 38th Avenue and two full-access stop-controlled driveways on NW Fisher Creek Drive. As site civil engineering plans are finalized, landscaping, above ground utilities, and signing should be located and maintained along the site frontage and throughout the site in a manner that preserves adequate intersection sight distance in accordance with City of Camas standards. Sight distance availability should be confirmed during the final engineering process.

FINDINGS AND RECOMMENDATIONS

Based on the results of the transportation impact analysis, the proposed development can be constructed while maintaining acceptable levels of service and safety on the surrounding transportation system given assuming the provision of the recommended mitigation measures. The primary findings and recommendations of this study are summarized below.

Findings

- The proposed mixed-use development is estimated to generate 5,037 net new weekday trips, including 535 during the a.m. peak hour (388 in, 147 out) and 522 during the p.m. peak hour (166 in, 356 out).
- Under Scenario 1 year 2021 total traffic conditions, the SE 20th Street/SE 192nd Street intersection requires mitigation to comply with City of Vancouver operating standards during the weekday p.m. peak hour.
 - Mitigation to restore acceptable operations includes provision of a second westbound left-turn lane and traffic signal retiming that allocates additional green time to the primary north-south traffic patterns along NE 192nd Avenue.
- Under Scenario 2, both year 2021 background and total traffic conditions require mitigation at the SE 20th Street/SE 192nd Street intersection to comply with City of Vancouver operating standards during the weekday p.m. peak hour.
 - Scenario 2 involves higher westbound approach traffic volumes as compared to Scenario 1.
 - Mitigation to restore acceptable operations includes provision of a second westbound left-turn lane and a separate westbound right-turn lane as well as corresponding signal retiming that allocates additional green time to the primary north-south traffic patterns along NE 192nd Avenue.

Recommendations

- The SE 20th Street/SE 192nd Street intersection should be mitigated to comply with City of Vancouver operating standards in conjunction with site development.
 - For network connectivity Scenario 1, mitigation should include provision of a second westbound left-turn lane and traffic signal retiming that allocates additional green time to the primary north-south traffic patterns along NE 192nd Avenue.
 - For network connectivity Scenario 2, mitigation should include provision of a second westbound left-turn lane and a separate westbound right-turn lane as well as corresponding signal retiming that allocates additional green time to the primary north-south traffic patterns along NE 192nd Avenue.

- On-site and off-site landscaping and any above ground utilities at the site driveways and internal roadways should be installed and maintained to ensure that adequate sight distance is provided upon buildout in accordance with City of Camas standards. Further, sight distance availability should be confirmed during the final engineering process.

We trust this report adequately addresses the traffic impacts associated with the proposed Grass Valley development. Please contact us if you have any questions.

Sincerely,
KITTELSON & ASSOCIATES, INC.

Appendix B

Description of Level-of-Service Criteria

APPENDIX B LEVEL-OF-SERVICE CONCEPT

Level of service (LOS) is a concept developed to quantify the degree of comfort (including such elements as travel time, number of stops, total amount of stopped delay, and impediments caused by other vehicles) afforded to drivers as they travel through an intersection or roadway segment. Six grades are used to denote the various level of service from "A" to "F".¹

SIGNALIZED INTERSECTIONS

The six level-of-service grades are described qualitatively for signalized intersections in Table B1. Additionally, Table B2 identifies the relationship between level of service and average control delay per vehicle. Control delay is defined to include initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. Using this definition, Level of Service "D" is generally considered to represent the minimum acceptable design standard.

Table B1. Level-of-Service Definitions (Signalized Intersections)¹

Level of Service	Average Delay per Vehicle
A	Very low average control delay, less than 10 seconds per vehicle. This occurs when progression is extremely favorable, and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
B	Average control delay is greater than 10 seconds per vehicle and less than or equal to 20 seconds per vehicle. This generally occurs with good progression and/or short cycle lengths. More vehicles stop than for a level of service A, causing higher levels of average delay.
C	Average control delay is greater than 20 seconds per vehicle and less than or equal to 35 seconds per vehicle. These higher delays may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
D	Average control delay is greater than 35 seconds per vehicle and less than or equal to 55 seconds per vehicle. The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle length, or high volume/capacity ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	Average control delay is greater than 55 seconds per vehicle and less than or equal to 80 seconds per vehicle. This is usually considered to be the limit of acceptable delay. These high delay values generally (but not always) indicate poor progression, long cycle lengths, and high volume/capacity ratios. Individual cycle failures are frequent occurrences.
F	Average control delay is in excess of 80 seconds per vehicle. This is considered to be unacceptable to most drivers. This condition often occurs with oversaturation. It may also occur at high volume/capacity ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also contribute to such high delay values.

¹ Most of the material in this appendix is adapted from the Transportation Research Board, Highway Capacity Manual, (2000).

Table B2. Level-of-Service Criteria for Signalized Intersections

Level of Service	Average Control Delay per Vehicle (Seconds)
A	<10.0
B	>10 and ≤20
C	>20 and ≤35
D	>35 and ≤55
E	>55 and ≤80
F	>80

UNSIGNALIZED INTERSECTIONS

Unsignalized intersections include two-way stop-controlled (TWSC) and all-way stop-controlled (AWSC) intersections. The 2000 Highway Capacity Manual (HCM) provides models for estimating control delay at both TWSC and AWSC intersections. A qualitative description of the various service levels associated with an unsignalized intersection is presented in Table B3. A quantitative definition of level of service for unsignalized intersections is presented in Table B4. Using this definition, Level of Service "E" is generally considered to represent the minimum acceptable design standard.

Table B3. Level-of-Service Criteria for Unsignalized Intersections

Level of Service	Average Delay per Vehicle to Minor Street
A	<ul style="list-style-type: none">Nearly all drivers find freedom of operation.Very seldom is there more than one vehicle in queue.
B	<ul style="list-style-type: none">Some drivers begin to consider the delay an inconvenience.Occasionally there is more than one vehicle in queue.
C	<ul style="list-style-type: none">Many times there is more than one vehicle in queue.Most drivers feel restricted, but not objectionably so.
D	<ul style="list-style-type: none">Often there is more than one vehicle in queue.Drivers feel quite restricted.
E	<ul style="list-style-type: none">Represents a condition in which the demand is near or equal to the probable maximum number of vehicles that can be accommodated by the movement.There is almost always more than one vehicle in queue.Drivers find the delays approaching intolerable levels.
F	<ul style="list-style-type: none">Forced flow.Represents an intersection failure condition that is caused by geometric and/or operational constraints external to the intersection.

Table B4. Level-of-Service Criteria for Unsignalized Intersections

Level of Service	Average Control Delay per Vehicle (Seconds)
A	<10.0
B	>10.0 and \leq 15.0
C	>15.0 and \leq 25.0
D	>25.0 and \leq 35.0
E	>35.0 and \leq 50.0
F	>50.0

It should be noted that the level-of-service criteria for unsignalized intersections are somewhat different than the criteria used for signalized intersections. The primary reason for this difference is that drivers expect different levels of performance from different kinds of transportation facilities. The expectation is that a signalized intersection is designed to carry higher traffic volumes than an unsignalized intersection. Additionally, there are a number of driver behavior considerations that combine to make delays at signalized intersections less galling than at unsignalized intersections. For example, drivers at signalized intersections are able to relax during the red interval, while drivers on the minor street approaches to TWSC intersections must remain attentive to the task of identifying acceptable gaps and vehicle conflicts. Also, there is often much more variability in the amount of delay experienced by individual drivers at unsignalized intersections than signalized intersections. For these reasons, it is considered that the control delay threshold for any given level of service is less for an unsignalized intersection than for a signalized intersection. While overall intersection level of service is calculated for AWSC intersections, level of service is only calculated for the minor approaches and the major street left turn movements at TWSC intersections. No delay is assumed to the major street through movements. For TWSC intersections, the overall intersection level of service remains undefined: level of service is only calculated for each minor street lane.

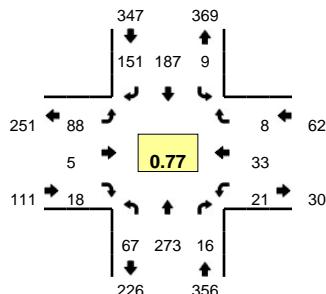

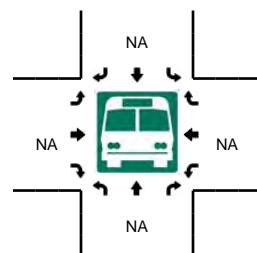

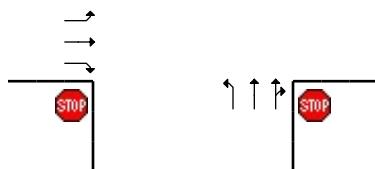

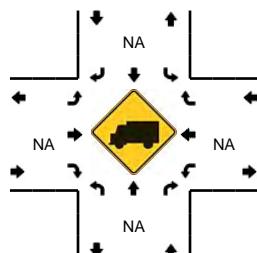

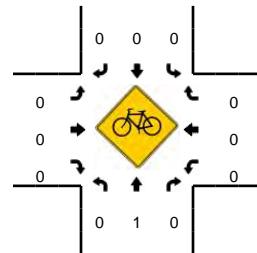

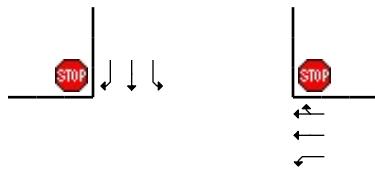

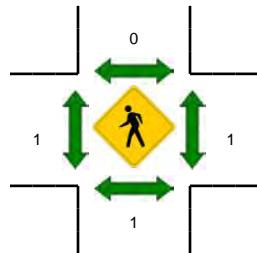

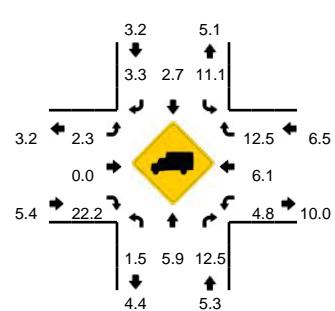

In the performance evaluation of TWSC intersections, it is important to consider other measures of effectiveness (MOEs) in addition to delay, such as v/c ratios for individual movements, average queue lengths, and 95th-percentile queue lengths. By focusing on a single MOE for the worst movement only, such as delay for the minor-street left turn, users may make inappropriate traffic control decisions. The potential for making such inappropriate decisions is likely to be particularly pronounced when the HCM level-of-service thresholds are adopted as legal standards, as is the case in many public agencies.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

ITE DEVIATION DETAILS

Weekday, Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m.

Landuse	No deviations from ITE.
Methods	220 - Apartment (General Urban/Suburban) The chosen method (Average) is not recommended by ITE. ITE recommends LIN based on the criterion.
External Trips	220 - Apartment (General Urban/Suburban) ITE does not recommend a particular pass-by% for this case.

Weekday, PM Peak Hour of Generator

Landuse	No deviations from ITE.
Methods	714 - Corporate Headquarters Building (General Urban/Suburban) The chosen method (Average) is not recommended by ITE. ITE recommends LOG based on the criterion.
	710 - General Office Building (General Urban/Suburban) The chosen method (Average) is not recommended by ITE. ITE recommends LIN based on the criterion.
External Trips	714 - Corporate Headquarters Building (General Urban/Suburban) ITE does not recommend a particular pass-by% for this case.

Unconstrained Internal Capture Rates for Trip Origins and Destinations Within a Multi-use Development

ITE Trip Generation Handbook, 2nd Edition

Table 7.1 Unconstrained Internal Capture Rates for Trip Origins Within a Multi-Use Development

			WEEKDAY	
		MIDDAY PEAK HOUR	p.m. PEAK HOUR OF ADJACENT STREET TRAFFIC	DAILY
from OFFICE	to Office	2%	1%	2%
	to Retail	20%	23%	22%
	to Residential	0%	2%	2%
from RETAIL	to Office	3%	3%	3%
	to Retail	29%	20%	30%
	to Residential	7%	12%	11%
from RESIDENTIAL	to Office	N/A	N/A	N/A
	to Retail	34%	53%	38%
	to Residential	N/A	N/A	N/A

Table 7.2 Unconstrained Internal Capture Rates for Trip Destinations Within a Multi-Use Development

			WEEKDAY	
		MIDDAY PEAK HOUR	p.m. PEAK HOUR OF ADJACENT STREET TRAFFIC	DAILY
to OFFICE	from Office	6%	6%	2%
	from Retail	38%	31%	15%
	from Residential	0%	0%	N/A
to RETAIL	from Office	4%	2%	4%
	from Retail	31%	20%	28%
	from Residential	5%	9%	9%
to RESIDENTIAL	from Office	0%	2%	3%
	from Retail	37%	31%	33%
	from Residential	N/A	N/A	N/A

Caution: The estimated typical internal capture rates presented in Tables 7.1 and 7.2 rely directly on data collected at a limited number of multi-use sites in Florida. While ITE recognizes the limitations of these data, they represent the only known credible data on multi-use internal capture rates and are provided as illustrative of typical rates. ***If local data on internal capture rates by paired land uses can be obtained, the local data may be given preference.***

N/A - Not Available; logic indicates there is some interaction between these two land uses; however, the limited data sample on which this table is based did not record any interaction.

Proposed Unconstrained Values for Percent Distribution of Internal Trip Destinations for Exiting Trips and for Internal Trip Origins for Entering Trips

NCHRP Report 684

Table 99. Proposed unconstrained values for percent distribution of internal trip destinations for exiting trips - A.M. peak period.

Origin Land Use	Destination Land Use					
	Office	Retail	Restaurant	Residential	Cinema	Hotel
Office	N/A	28%	63%	1%	N/A	0%
Retail	29%	N/A	13%	14%	N/A	0%
Restaurant	31%	14%	N/A	4%	N/A	3%
Residential	2%	1%	20%	N/A	N/A	0%
Cinema	N/A	N/A	N/A	N/A	N/A	N/A
Hotel	75%	14%	9%	0%	N/A	N/A

Note: The values presented in the table above are based on Table 7.1 in ITE Trip Generation Handbook, 2nd Edition.

N/A - Not Available; indicates no data or interaction between the land uses within the same category accounted for within ITE trip generation rates.

Table 100. Proposed unconstrained values for percent distribution of internal trip destinations for exiting trips - P.M. peak period.

Origin Land Use	Destination Land Use					
	Office	Retail	Restaurant	Residential	Cinema	Hotel
Office	N/A	20%	4%	2%	0%	0%
Retail	2%	N/A	29%	26%	4%	5%
Restaurant	3%	41%	N/A	18%	8%	7%
Residential	4%	42%	21%	N/A	0%	3%
Cinema	2%	21%	31%	8%	N/A	2%
Hotel	0%	16%	68%	2%	0%	N/A

Note: The values presented in the table above are based on Table 7.1 in ITE Trip Generation Handbook, 2nd Edition.

N/A - Not Available; indicates no data or interaction between the land uses within the same category accounted for within ITE trip generation rates.

Table 101. Proposed unconstrained values for percent distribution of internal trip origins for entering trips - A.M. peak period.

Origin Land Use	Destination Land Use					
	Office	Retail	Restaurant	Residential	Cinema	Hotel
Office	N/A	32%	23%	0%	N/A	0%
Retail	4%	N/A	50%	2%	N/A	0%
Restaurant	14%	8%	N/A	5%	N/A	4%
Residential	3%	17%	20%	N/A	N/A	0%
Cinema	N/A	N/A	N/A	N/A	N/A	N/A
Hotel	3%	4%	6%	0%	N/A	N/A

Note: The values presented in the table above are based on Table 7.2 in ITE Trip Generation Handbook, 2nd Edition.

N/A - Not Available; indicates no data or interaction between the land uses within the same category accounted for within ITE trip generation rates.

Table 102. Proposed unconstrained values for percent distribution of internal trip origins for entering trips - P.M. peak period.

Origin Land Use	Destination Land Use					
	Office	Retail	Restaurant	Residential	Cinema	Hotel
Office	N/A	8%	2%	4%	1%	0%

Retail	31%	N/A	29%	46%	26%	17%
Restaurant	30%	50%	N/A	16%	32%	71%
Residential	57%	10%	14%	N/A	0%	12%
Cinema	6%	4%	3%	4%	N/A	1%
Hotel	0%	2%	5%	0%	0%	N/A

Note: The values presented in the table above are based on Table 7.2 in ITE Trip Generation Handbook, 2nd Edition.

N/A - Not Available; indicates no data or interaction between the land uses within the same category accounted for within ITE trip generation rates.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
