RE: Lacamas Sewer Creek Pump Station; SEPA19-08; SEPA 201901936

SEPA Official:

The Southwest Clean Air Agency (SWCAA) was recently notified that your agency has issued/will issue a SEPA Determination for the above project. Please be advised that SWCAA administers/enforces a number of regulations that may apply to the proposed project. The applicability of these regulations depends on the exact nature of the project in question. The following sections provide brief summaries of the requirements for the general types of activity that may be affected by this project.

Demolition / Asbestos [SWCAA 476]:

- Prior to **demolition or renovation** of a structure, a thorough asbestos inspection must be conducted by an AHERA-certified inspector in order to determine the presence of asbestos containing material (ACM) in all affected structure(s) or area(s).
A copy of the AHERA asbestos inspection report must be posted for viewing at the project site.

Asbestos Containing Material PRESENT	Asbestos Containing Material NOT PRESENT
<p>If the asbestos inspection reveals ACM to be present in the affected structure(s) or area(s) –</p> <p><i>Required documents/reports:</i> (for each structure)</p> <ul style="list-style-type: none">• Notification of Demolition• Notice of Intent to Remove Asbestos• AHERA asbestos inspection report <p>There is a 10-calendar day waiting period from the time the notices are submitted before asbestos removal or structure demolition may begin.</p> <p>All asbestos must be completely removed from the affected structure(s) or area(s) prior to structure demolition taking place.</p> <p>ACM must be removed by <u>certified personnel</u> in full accordance with the Southwest Clean Air Agency's Regulations SWCAA 476 (Standards for Asbestos Control) and with 40 CFR Part 61 Subpart M (National Emission Standards for Asbestos).</p>	<p>If the asbestos inspection does <u>not</u> reveal ACM to be present in the affected structure(s) or area(s)...</p> <p>...and the structure is to be demolished –</p> <p><i>Required documents/reports:</i></p> <ul style="list-style-type: none">• Notification of Demolition• AHERA asbestos inspection report <p>There is a 10-calendar day waiting period from the time the notification is submitted before the demolition may begin.</p> <p>...and the project involves only renovation and that renovation does not involve the removal of load bearing walls –</p> <p><i>Required documents/reports:</i></p> <p>none</p>

Construction Dust [SWCAA 400: General Regulations for Air Pollution Sources]:

- Construction and earthmoving activities have the potential to generate excessive dust emissions if reasonable control measures are not implemented. SWCAA Regulation 400-040(2) requires that “no person shall cause or permit the emission of particulate matter from any stationary source to be deposited beyond the property under direct control of the owner or operator of the stationary source in sufficient quantity to interfere unreasonably with the use and enjoyment of the property upon which the material is deposited”. Furthermore,

SWCAA Regulation 400-040(8)(a) requires that “the owner or operator of any source of fugitive dust shall take reasonable precautions to prevent fugitive dust from becoming airborne and shall maintain and operate the source to minimize emissions”.

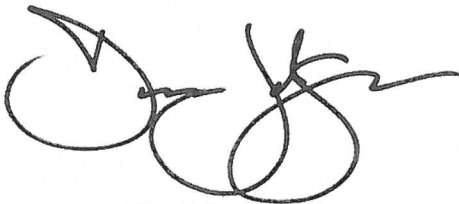

- Common control measures to mitigate the emission of dust from construction and earthmoving activities include: application of water before and during earthmoving operations, application of water to disturbed surface areas (including access roads and staging areas) after earthmoving operations, application of chemical dust control products and/or surfactants, limiting access to open/disturbed areas, reducing equipment/vehicle speeds, establishing vegetative cover on inactive areas and ceasing operations altogether during high wind events.
- Violations of SWCAA Regulation 400-040 may result in civil penalties being assessed against the project operator and/or property owner.

Registration, Notification and Permitting of Air Pollution Sources [SWCAA 400-072, 100, 109, 110]

- SWCAA’s General Regulations regulate the installation and/or modification of any building, structure, or facility that emits or may emit an air contaminant. An air contaminant is defined as “...dust, fume, mist, smoke, other particulate matter, vapor, gas, odorous substance, or any combination thereof”. Project proponents for any proposed installation or modification that creates a new or increased source of air contaminants may be required to register with the agency and submit a notification or permit application in accordance with SWCAA Regulations 400-072, 100 and 109. If an Air Discharge Permit (ADP) or Small Unit Notification (SUN) is required, the application must be approved and an ADP/SUN issued before commencing construction, in accordance with SWCAA 400-110. If the proposed project includes any new or modified air pollutant sources, the proponent should consult with SWCAA to determine if these requirements are applicable.
- The proposed project (replacement of an old sewer pump station and associated piping with two (2) new stations) may add equipment (e.g., emergency generator engine(s)) for which an ADP or SUN would be required.

The proponent of this project may contact SWCAA at 360-574-3058 for more information regarding the agency’s requirements. Notification forms, permit applications, agency regulations and other information are available on the internet at <http://www.swcleanair.org>.

Sincerely,

A handwritten signature in black ink, appearing to read 'Duane Van Johnson', with a stylized, looping flourish at the end.
